#### 1. Introduction

1.1 The purpose of this Topic Paper is to outline the Council's approach to the proposed housing, mixed use and purpose built student accommodation (PBSA) site allocations set out in Policies H1, H2, H3 and SSA1 to SSA4 of the draft City Plan Part Two (CPP2).

#### 2. Background

- 2.1 In City Plan Part One (CPP1) strategic policies set the overall amounts of new development to be delivered across the city to 2030 and the broad locations where significant new housing development will take place. Part Two of the City Plan builds on this strategic framework, by identifying and allocating additional sites particularly for new housing development to enable the delivery of sufficient new housing to meet the adopted strategic housing target.
- 2.2 CPP1 Policy CP1 (Housing Delivery) sets out how the Council will make provision for at least 13,200 new homes to be built over the plan period 2010 2030, equating to an annual average rate of provision of 660 dwellings.
- 2.3 Eight broad 'Development Areas' within the city where major development is expected to be concentrated are identified in Policies DA1 DA8, and strategic site allocations within these allocate housing and mixed use sites providing a total of 3,635 new homes. This includes an allowance of around 1,060 units across greenfield sites in the urban fringe as a whole based on information in the 2014 Urban Fringe Assessment<sup>1</sup>. No specific sites on the urban fringe were allocated in CPP1, with the exception of Toads Hole Valley (Policy DA7).
- 2.4 Significant further capacity for housing is identified in the council's Strategic Housing Land Availability Assessment (SHLAA) which is updated annually. These sources, along with a further 'call for sites' exercise at the scoping stage consultation, have been used to inform further site allocations for housing in the draft City Plan Part Two.

## 3. Overarching Approach in City Plan Part Two

- 3.1 The housing and mixed use site allocations in CPP2 are considered across four categories, each covered by separate policies. These are:
  - Housing and Mixed Use Sites (Policy H1)
  - Urban fringe sites (Policy H2)
  - Purpose Built Student Accommodation (Policy H3)
  - Strategic Site Allocations (Policies SSA1 SSA4)
- 3.2 The process undertaken to identify sites suitable for allocation under each category and to draw up policies is set out in Sections 4-6 below.

#### Sustainability Appraisal of options for housing and mixed use sites

Three options for the approach to the site allocation process were identified. These were:

- Option 1: Do not allocate any sites for housing. Rely on the market to bring forward suitable sites.
- Option 2: Allocate all sites in the SHLAA (long list) that do not have planning permission and those that have planning permission but have not yet commenced, that are considered deliverable within the plan period to 2030.
- Option 3: Allocate sites in the SHLAA (long list) capable of delivering 10 or more residential units, that do not have planning permission and those that have planning permission but have not yet commenced, that are deliverable within the plan period.

The three options were subjected to a sustainability appraisal process<sup>2</sup>. This assessed the potential impacts of pursuing each option against a number of sustainability indicators in order to establish which option was most likely to result in the greatest sustainability benefits. This appraisal is set out in detail in City Plan Part Two Sustainability Appraisal.

Overall, Option 3 had more potential for positive impacts across a greater range of sustainability appraisal objectives, and less potential for adverse impacts than the two other options, including potential for positive impact for biodiversity, landscape, housing, best use of land, access, health and economic development.

Although Option 2 had greater potential for more significant positive impacts for housing delivery when compared with options 1 and 3, the flexibility of Option 3 for smaller sites could result in greater citywide benefits, e.g. for making the best use of land, for economic development, and for access to services, as this would allow other uses to come forward in response to market conditions, whilst still allowing residential uses to come forward. Overall, Option 2 was found to be too prescriptive and lacked flexibility, particularly for smaller sites. Option 1 was found to be very flexible, however lacked certainty for developers and may inhibit overall housing delivery, and when Option 3 is compared with Option 1, the certainty of allocating larger SHLAA sites was considered to be more positive for housing delivery.

\_

<sup>&</sup>lt;sup>2</sup> Set out in detail in the Sustainability Appraisal Report.

# 4. Housing and Mixed Use Site Allocations (Policy H1)

4.1 The approach taken to identify brownfield site allocations for inclusion in Policy H1 is described below. It has been undertaken in tandem with an update to the council's Strategic Housing Land Availability Assessment (SHLAA)<sup>3</sup>. The SHLAA is an annual assessment of land that has potential for housing and includes estimated timescales for when sites are likely to be developed. It is a technical document that does not allocate land for development.

#### 1) Initial Identification of Sites

- 4.2 The starting point for the initial identification of sites was the SHLAA Update 2016, published in February 2017.
- 4.3 Additional sites were identified from the data sources set out in Table 1 to form the initial list of sites for consideration. At this stage 297 sites were under consideration.

Data Source	Description
Call for sites from 2016 scoping	The City Plan Part Two scoping consultation in 2016 included a call
consultation	for sites to be put forward as possible housing site allocations
	(Use Class C3). All sites put forward were assessed using SHLAA
	assessment template and added to the SHLAA if considered
	suitable for housing development
Planning applications	Sites identified through the planning application processes and
	discussions with developers/agents. This included applications
	under consideration as well as determined.
Information from other Council	For example sites identified from the Council's Estates
departments	Regeneration Team
Commercial property databases	Sites advertised as being available for development on
	commercial property databases

Table 1 – Sources of data for additional sites considered

#### 2) Production of (SHLAA) long list

- 4.4 The following sites were excluded to form an initial 'SHLAA long list' for further consideration as they were either already allocated or no longer available:
  - City Plan Part 1 strategic allocations these are sites that are already allocated for new development in CPP1;
  - Sites with planning permissions that had commenced. Unimplemented permissions were retained on the long list due to the uncertainty as to whether they would be brought forward.
- 4.5 The long list therefore consisted of remaining sites from the previous 2016 version of the SHLAA and any new sites put forward during the 2016 call for sites, or those that had been identified through the development management process.

#### 3) Stage 1 Review List

.

<sup>&</sup>lt;sup>3</sup> www.br<u>ighton-hove.gov.uk/content/planning/planning-policy/strategic-housing-land-availability-assessment</u>

- 4.6 Following the sustainability options assessment and selection of the preferred option for the policy approach, the long list was reviewed and the following sites removed to form a Stage 1 review list:-
  - Sites providing less than 10 units (following the SA recommended option);
  - Sites not considered capable of being delivered in plan period e.g. based on an assessment of current active uses or known intentions of landowners;
  - Sites considered inappropriate for allocation due to an implemented planning permission or covered by other policies. These could include Employment Site Allocations or other Development Plan allocations (e.g. waste, PBSA, etc).

#### 4) Stage 2 Review List

- 4.7 The next step of the process involved consideration of the conclusions and recommendations of the Housing and Employment Land Study (HELA)<sup>4</sup>. The HELA included a review of the methodological approach to site identification and yield analysis set out in the SHLAA.
- 4.8 The analysis in the HELA concluded that the approach taken to site consideration through the SHLAA was generally sound, although some recommendations were made, as follows:
  - contact site owners /agents, where site availability may be uncertain and ask the landowners to confirm that at some point in the future the site/ property will be surplus to requirements and will therefore be available for residential use.
  - reassess site yields for all SHLAA sites in instances where there has been limited market activity to ensure an up-to-date assessment has been conducted for all available opportunities.
  - reconsider the proposed employment floorspace on mixed-use sites where limited information is available on the rationale for the scale of provision. In some instances there were considered to be conservative estimates and given the council's evidence suggests demand for employment space is high, mixed-use sites represent an opportunity to increase employment provision.
- 4.9 These recommendations were followed through and led to the re-appraisal of residential yields and employment floorspace where appropriate as well as the removal of some sites if new evidence on predicted long-term use had been identified.

#### 5) Sustainability Appraisal site assessments

The next stage was more detailed consideration of the sustainability implications of development for sites in the Stage 2 Review List. This was achieved through site assessments against the Sustainability Appraisal Framework. Site profiles were produced for all sites still under consideration to assist this process<sup>5</sup>. The site profiles also identify whether some sites may have potential for mixed uses. For example, on current employment sites there may be an opportunity to redevelop them by providing the employment more efficiently on site. This could enable other uses to be provided on the site whilst still retaining the same level of employment.

The SA site assessment process did not assess options for uses on sites, nor was it used to discount sites, for example on sustainability grounds. The site assessment process informs any on-site

<sup>&</sup>lt;sup>4</sup> Housing and Employment Land Study, DLP Consultants, 2018.

<sup>&</sup>lt;sup>5</sup> Profiles for allocated sites are available to view in Appendix 4.

mitigation and formed the basis for the SA assessment of the final policy.

Sites were then divided into two categories to reflect whether mixed use development was to be a policy requirement or not. This is reflected in the policy.

### 6) Further review of sites on (stage 2) Review List

- 4.10 This final stage involved further review and refinement of the list of sites based on updated information, for example:
  - Any further information on the likelihood of sites coming forward within the plan period;
  - Refinements to quantums of development based on new planning applications.
- 4.11 In line with the HELA recommendation, the owners of some sites were directly contacted in order to ascertain whether the relevant site was likely to come forward for development within the Plan period. Where this was not possible to confirm the site has been included in the draft Plan and will be subject to public consultation where it is hoped further information may be forthcoming.

#### 7) Final policy

- 4.12 Sites progressed through all stages have been allocated for residential or mixed use development in Policy H2 or as strategic site allocations in Policies SSA1 7.
- 4.13 A full audit trail showing all sites considered and the stage at which they were excluded if not allocated is set out in Appendix 1.

## 5. Urban Fringe Site Allocations (Policy H2)

5.1 Policy CP1 (Housing Delivery) of CPP1 includes an allowance for 1,060 residential dwellings to come forward from within the city's urban fringe to contribute to the overall housing target of 13,200 new homes; however no specific sites were allocated as part of the policy. The supporting text to Policy SA4 (Urban Fringe) details how sites identified to have potential for housing would be included in the SHLAA then assessed in more detail as part of the preparation of City Plan Part Two with a view to formally allocating sites. This process has now been undertaken and a number of urban fringe sites are included in the draft Plan as proposed housing allocations.

#### SA of options for urban fringe sites

In addition to the SA carried out for generic housing allocations, the SA process appraised three options with regard to the approach to urban fringe site allocations:

- Option 1 no policy and no site allocations
- Option 2 criteria based policy with schedule of allocations
- Option 3 bespoke policy for each site

The appraisal is set out in detail in City Plan Part Two Sustainability Appraisal.

In summary both Options 2 and 3 were found to have merit as both would provide the opportunity to include specific consideration of particular issues, e.g. biodiversity, landscape, heritage and archaeology. Although Option 3 could result in more significant positive effects, the level of detail provided in a site specific policy may not be required for all sites, for instance, smaller sites with less housing potential, or those with less on-site considerations/constraints and may result in unnecessary repetition. It was recommended that both Options 2 and 3 could be pursued, with all sites being included in a generic urban fringe allocation policy with specific site considerations clearly identified for each.

These recommendations have been taken forward via Policy H2. The site at Benfield Valley is specifically addressed by Policy SA7 due to its cross-cutting policy and delivery issues.

Sites with capacity for fewer than 10 units were discounted from consideration for allocation in line with the overall approach to site allocations following the SA options for housing sites outcome.

5.2 Site allocations in the urban fringe have been informed by two Urban Fringe Assessments which assess the potential contribution of the city's urban fringe sites to accommodate additional residential development. These are the initial 2014 assessment<sup>6</sup> which formed a background evidence document to CPP1 and the 2015 Further Assessment of Urban Fringe Sites<sup>7</sup> which

<sup>&</sup>lt;sup>6</sup> 'Brighton & Hove Urban Fringe Assessment', Land Use Consultants (2014), available at <a href="www.brighton-hove.gov.uk/content/planning/planning-policy/city-plan-part-one-background-studies">www.brighton-hove.gov.uk/content/planning/planning-policy/city-plan-part-one-background-studies</a>

<sup>&</sup>lt;sup>7</sup> Available at www.brighton-hove.gov.uk/content/planning/planning-policy/city-plan-part-two-background-studies

comprised further assessments relating to landscape and ecology<sup>8</sup> and archaeology<sup>9</sup>. These further assessments have assessed in more detail sites that were identified as having significant landscape effects, were within or adjacent to a designated site of nature conservation interest, or were within an Archaeological Notification Area. The outcomes of these further assessments have led to refinements to the potential development areas considered suitable for housing where necessary. At this stage of analysis, 33 sites within 19 clusters were considered to have some potential for housing development.

- 5.3 In considering which of these sites/clusters are suitable for allocating in CPP2, a number of other factors have been taken into consideration, as set out below.
- 5.4 A number of planning applications have come forward on urban fringe sites since the adoption of CPP1. As of February 2018, development has been permitted with regard to the following sites:
  - Mile Oak Road, Portslade (planning consent granted for 125 dwellings, October 2017);
  - Land west of Falmer Avenue, Saltdean (planning consent granted for 32 dwellings, December 2016);
  - Cluster at Coombe Farm (planning permission subject to legal agreement granted for 60 dwellings, September 2017);
  - Land to the rear of 28-30 Longhill Road (planning consent granted for 2 dwellings, July 2016);
- 5.5 The planning consents that have been granted indicate that the sites are suitable and available for development.
- 5.6 Further consideration was given to the likelihood of sites being available for development within the plan period. For example, the availability of sites currently in use as allotments is dependent on factors including the feasibility of re-providing the allotments in a suitable location and obtaining consent from the Secretary of State for the disposal of the allotment, which are both unknown. Respondents to the Scoping Consultation exercise for City Plan Part Two (2016) also expressed strong objection to the loss of allotment sites; pointing to the ongoing demand for allotments together with a range of health and community benefits.
- 5.7 Another site, although owned by the council, is on a long lease to Roedean Miniature Golf Course. The leaseholders have expressed concerns that development may impact upon the ability to use the site for miniature golf purposes. Availability of the site is very uncertain and dependent on various factors including whether the miniature golf course could continue to function on a smaller site and effective measures to address open space needs.
- 5.8 Representations and further information submitted in response to the 2016 City Plan Part Two Scoping Document have also been taken into account. This includes landowner and developer interests in the sites identified in the UFA Assessments as well as issues raised by third parties. Where relevant to site circumstances detailed consideration has been given to potential

<sup>&</sup>lt;sup>8</sup> 'Brighton and Hove: Further Assessment of Urban Fringe Sites 2015 - Landscape and Ecological Assessments', Land Use Consultants (2015).

<sup>&</sup>lt;sup>9</sup> 'Brighton & Hove: Further Assessment Of Urban Fringe Sites 2015: Archaeological Desk-Based Assessment', Archaeology South East (2016)

development boundaries by the Council's Heritage Team, City Transport, City Parks and East Sussex County Council's ecologist and landscape architect.

#### **Outcome**

- 5.9 25 UFA sites in 14 clusters have been proposed for allocation and are included in the draft plan as 14 site allocations. The areas of development potential are indicative to allow for minor changes resulting from new information and/or further evidence received through consultation responses on the draft Plan. It is important to note that some of the urban fringe sites are also proposed Local Green Spaces, consultation responses to which will also be taken into account when determining the Submission Plan (for example with regard to the sites at Benfield Valley and Ladies Mile Road).
- 5.10 Appendix 1 sets out in more detail which of the specific sites identified in the UFA have been taken forward to form part of an allocation in City Plan Part Two. All of the 14 urban fringe site allocations have undergone site assessments against the SA Framework to help identify on-site mitigation and inform the final policy assessment.

# 6. Purpose Built Student Accommodation (Policy H3)

6.1 City Plan Policy CP21 allocated five sites for new development, of which Pelham Street remains undeveloped and without an extant permission. Additionally, the Falmer Released Land is identified in City Plan Part One Policy DA3 as being suitable for development of a range of uses, including Purpose Built Student Accommodation (PBSA).

#### **SA** of options for PBSA

Three options for the overall approach to PBSA were identified. These were:

- Option 1) Reliance on CPP1 Policy CP21 to provide the planning policy framework for PBSA
- Option 2) Criteria based policy with no preferred sites identified
- Option 3) Criteria based policy with additional appropriate sites identified as Strategic Allocations.

The three options were subjected to the sustainability appraisal process which is set out in detail in City Plan Part Two Sustainability Appraisal. Overall Option 3 had the most potential for positive impacts across the greatest range of sustainability objectives, in particular for housing as it provides greater certainty where PBSA would be supported which may help to bring forward development and reduce reliance on the HMO market, and also for access to services and making the best use of land as could help to ensure the competing development needs of the city are met.

All options were found to have potential for adverse impacts against some of the environmental site-based objectives although Options 2 and 3 would provide the opportunity to address any site specific considerations. Option 2 was considered to offer greater flexibility and the ability to respond to changing markets when compared with Option 3. However this approach lacked certainty for developers with the risk that suitable sites may not come forward resulting in continued reliance on the HMO market to meet students' housing needs.

The SA process did not carry out an assessment of all the sites put forward for PBSA during the Call for Sites as the majority were not considered to be suitable for allocation and therefore were not considered to be reasonable alternatives. The SA carried out site assessments for the two sites allocated for PBSA which helped to identify any on-site mitigation and informed the final policy assessment.

6.2 A number of locations/sites were put forward for new PBSA as part of the CPP2 'call for sites' exercise conducted in 2016. The limited number of specific sites suggested reflects the difficulty in accommodating significant new PBSA developments within the city's administrative boundaries. The suggested sites have been analysed as follows:

Site/location	Does the site comply with the existing and emerging policy on locating student accommodation?	Deliverable as PBSA?	Suitable for allocation?
Lewes Road Bus Garage	Yes, it is located in close proximity to the university campuses along a sustainable transport route.	Yes, it is a use likely to be supported by the landowner. Some discussions have previously taken place and the site was put forward in a call for sites.	Yes
Amex House site	No, site is already allocated for alternative uses in CPP1 Policy DA5.	No, planning application for alternative development proposals is under consideration	No.
Unspecified Urban Fringe sites	No specific site identified, however urban fringe sites are likely to be have poor transport links to university campuses, with sites suitable for development allocated for residential use.	Unknown	No
Brighton Marina	No, the Inner Harbour is a strategic allocation in Policy DA2 of CPP1 for alternative uses. No known land availability elsewhere in the marina.	No, incompatible with existing planning policy.	No.
Waste Transfer Station, Moulsecoomb Way	No, site is a safeguarded waste site and within a strategic allocation for employment uses.	No, incompatible with existing planning policy.	No
Preston Barracks	Yes, site is allocated for PBSA in CPP1 Policy CP21	Yes, planning permission granted.	No.
Rottingdean	No specific site identified.	No specific site identified.	No
Falmer Released Land	Yes, site is assumed to refer to Falmer Released Land, which is identified as having potential for PBSA in CPP1 Policy DA3	Yes.	No
Toads Hole Valley	No, site is a strategic allocation for alternative uses in CPP1. SPD, and is poorly located to the university campuses.	Unknown.	No
Areas with high levels of HMOs – London Road and Lewes Road	No specific site identified	No specific site identified	No
Enterprise Point, Melbourne Street	No, site is a strategic allocation for employment use in CPP1 Policy CP3.	Yes – it is a use suggested by a prospective developer	No

6.3 Lewes Road Bus Garage is therefore identified as suitable for an additional allocation to those already allocated in CPP1, and is allocated in City Plan Part Two Policy H3. This is a large site

located on the A270 Lewes Road which connects the city centre to the universities, and is identified as the city's 'academic corridor' in City Plan Part One Policy DA3. It is within walking distance to the University of Brighton Moulsecoomb campus, and with excellent bus links to other university campuses at Falmer and within the city centre. Whilst it is currently in use as an operational bus garage, pre-application advice was provided in relation to the site in 2015 which indicated that the site owner had an aspiration to retain the bus garage use whilst developing PBSA above a new bus garage structure, or on redundant land within the site.

- Additionally the site faces directly onto the main Lewes Road adjacent to bus stops to the city centre and university campuses at Falmer and is considered to be separated from nearby residential streets. The University of Brighton Moulsecoomb campus, which has the greatest shortfall of PBSA provision, is less than 10 minutes' walk.
- 6.5 Discussions have also taken place relating to the potential redevelopment of a site at 118-132 London Road which could provide a significant amount of PBSA. This site is also considered to be suitable for this use and is allocated in Policy H3 for a minimum of 150 bedspaces. It is located on a busy main road and would have minimal effect on established residential areas, and is adjacent to bus stops to the city centre and university campuses.

## 7. Strategic Site Allocations (Policies SSA1 – SSA4)

- 7.1 Strategic Site Allocations are larger mixed use sites that are either likely to come forward for large-scale redevelopment and regeneration over the plan period, or in the case of Lyon Close cover a larger area where significant redevelopment is occurring on multiple proximate sites. Four such sites have been identified through officers' knowledge of development potential or, in the case of the Combined Engineering Depot, a response to the call for sites at the CPP2 scoping consultation stage. All have the potential to contribute substantially towards the city's development needs. The sites are:
  - Brighton General Hospital site (Policy SSA1)
  - Combined Engineering Depot (Policy SSA2)
  - Land at Lyon Close (Policy SSA3)
  - Sackville Trading Estate and Coal Yard, Hove (Policy SSA4)
- 7.2 Quantums and the mix of development have been informed through consideration of the site size and location, previous development proposals where appropriate and stakeholder engagement and consultation. In order to retain some flexibility, and to support increased densities where more detailed design and amenity considerations allow at the planning application stage, the floorspace and residential unit requirements are expressed as minimum figures.
- 7.3 Where sites are located within a Development Area identified in CPP1, the strategic priorities for that Development Area set out in the relevant CPP1 policy have been a consideration in determining the future development aspirations and proposed mix of use classes.

#### SA of options for strategic mixed use sites

Three options for the overall approach to the site allocation process were identified. These were:

- Option 1: Do not allocate sites for strategic mixed uses. Allow market to decide (e.g. amount, location and uses)
- Option 2: Have generic criteria-based policy allocating all strategic mixed use sites, with schedule of sites
- Option 3: Have detailed policy for each site allocation setting out site specific considerations and opportunities which could be achieved on site.

The three options were subject to the sustainability appraisal process which is set out in detail in City Plan Part Two Sustainability Appraisal. The results for options 2 and 3 were fairly similar and had positive effects across the same sustainability objectives, however overall option 3 had more potential for significant positive impact against these objectives when compared with option 2, including making the best use of land, providing housing, access, health and economic development. In particular, the key benefits of option 3 over other options is that it provides the opportunity to address any site specific considerations as well as set out more specific land use requirements and should therefore result in a better balance of uses where needed across the city. There was more uncertainty with option 1, particularly for the site-based objectives due to the uncertainty with regards to where development may come forward, and more potential for adverse impacts against some objectives including for economic development as this option may result in an imbalance of uses and less likely to meet citywide development needs.

All of the 4 strategic site allocations have undergone site assessments against the SA Framework to help identify on-site mitigation and inform the final policy assessment.

# **Appendices**

## Appendix 1 – Housing and Mixed Use Sites

The table below shows the four steps that were undertaken in the site assessment process, beginning with the SHLAA Long List. Green shading indicates a site was considered during the relevant stage and not excluded. Red shading indicates exclusion and the reason for exclusion is provided.

A map showing the location of allocated sites is provided after the table

Site Capacity	16 (nb: due to restrictive covenant)
Implied Site Density	17dph
Availability/Deliverability Issues	
Overall Site Location and	A Greenfield site designated as open space, within the built up area
Surroundings	boundary, adjoining an area of predominantly residential uses. The
	site forms part of a green strip that runs alongside the A259
	extending from Brighton to Rottingdean which includes private
	gardens and the miniature golf course at Roedean.
Land ownership and control –	BHCC owned. Site covered by a covenant which restricts the
no constraints or complex	number of dwellings that can be delivered. A higher amount of
multiple ownership	development could be achieved if the covenant was removed.
Willingness of land owner to	Lapsed planning consent demonstrates willingness to develop site.
develop site	BHCC seeking permission to dispose of site.
Achievability	Achievable within short-term (1-5years)
Overall Summary	

The site is BHCC owned open space of the natural/semi-natural typology. It is situated within the built up area boundary, contained on one side by the adjacent A259 and by residential dwellings and private gardens of a mix of densities, including very low density large properties to the north and the Marine Gate high density flatted development to the west. It has poor access to the SRN and no existing road access onto the site, which could be a key constraint.

The site has good access to a bus service, although this is fairly infrequent, local shops, and opportunities for recreation. There are unlikely to be any utilities on site, although is in fairly close proximity to utilities serving adjacent developments. The site is not in close proximity to local schools, and the nearest primary school has little capacity. The catchment secondary school although located some distance away does have capacity. The site is not in close proximity to a doctor's surgery. The site is unlikely to have issues with regards to air quality, flood risk, heritage assets, groundwater or contamination.

The site is likely to have some recreational value, as a publically accessible open space, is in fairly close proximity to an SNCI which could be subject to increased recreational pressure, and is also in close proximity to the Black Rock to Newhaven Cliffs SSSI and RIGS, although separated by the A259. The site is subject to high levels of road noise and is within the Roedean ANA.

The site is in a fairly exposed prominent position sitting alongside and approximately 2metres above the A259 and slopes in a southerly direction. The site may have some landscape sensitivities, as is located in fairly close proximity to the SDNP, although is situated within an urban context. The site is not within a Tall Building Corridor, although is adjacent to a tall building and is in close proximity to the Marina which is a tall building node. The site is not within a Heat Network

proximity to the Marina which is a tall building node. The site is not within a Heat Network Opportunity Area, although is fairly close to the Brighton Marina cluster.

The site has a restrictive covenant which limits the amount of dwellings that can be delivered on site, however if this is successfully removed then the site could have potential for a higher number of units. The site has policy constraints relating to biodiversity and archaeology. The site also has policy

constraints relating to open space although it is noted there are no deficiencies in this typology within the ward or sub-area.

The site has a lapsed planning consent for 16 dwellings which demonstrates willingness to develop the site. The site is considered suitable for residential development. Should the legal covenant be removed then a higher amount of development could be delivered on the site subject to mitigation.

develop site	Housing Committee approved refurbishment of the site to provide
	temporary accommodation for people to whom the council have a
	duty to accommodate. (Jan 2017)
Achievability	Achievable in short term (1-5years)

The site is situated within DA4. It is located within a mixed-use area within the London Road Town Centre and comprises the BHCC owned former housing office, which is now vacant. It is situated on level ground with good, close access to local facilities and services including health, recreation, shops, public transport, primary schools and utilities. Secondary schools are located further away. Health facilities and some primary schools appear to have capacity, however secondary schools in the catchment area are over-subscribed.

The site is situated adjacent to a tall building corridor and is within the New England Quarter heat network opportunity area and has good access to main A roads, although is some distance from the SRN.

The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, groundwater, recreation, landscape or contamination.

The site is situated within the AQMA and suffers from high road noise levels. Although the site itself is not considered to be at risk of surface water flooding, a large proportion of Oxford Street is at varying risks. The site is adjacent to the Valley Gardens Conservation Area and may be within its setting, and the prominent St Bartholemew's Church is c.150m from the site and is partially visible from the site. The site has policy constraints relating to loss of employment land (if B1) and heritage considerations. Pre-application discussions suggest a willingness to develop the site.

The site could be suitable for a mix of uses reflecting the mix in the surrounding area, e.g. residential over retail, subject to mitigation.

	Road. The site is located adjacent to the London Road Railway
	Viaduct and has good road, rail and bus transport links.
Land ownership and control –	Unknown. It is presumed the workshops are let on individual leases
no constraints or complex	to the various businesses.
multiple ownership	
Willingness of land owner to	Unknown. No previous planning applications. Site not put forward
develop site	during call for sites exercise.
Achievability	Achievable in long-term (11-15 year)
Overall Summary	

The site is situated within DA4. It is currently in use as workshops occupied by various independent businesses. It is located at the rear of a residential street in close proximity to the commercial/retail areas of Beaconsfield Road and London Road. It is situated on level ground with good close access to local facilities and services including health, recreation, primary schools, shops, public transport and utilities. Health facilities and primary schools appear to have capacity however secondary schools within the catchment area are over-subscribed. The site has good access to main A roads, although is some distance from the SRN. The site is not situated within a tall building corridor, however is adjacent to one. It is not within a Heat Network Opportunity Area.

The site is unlikely to have issues relating to flood risk, biodiversity designations, geological designations, landscape, groundwater and has no recreational value.

The site is adjacent to the Grade II\* listed London Road Railway Viaduct and is likely to be within its setting. Although not within the AQMA, the site is situated between Beaconsfield Road and London Road both of which are within the AQMA. The site suffers from high levels of road and railway noise. The site may have potential for contamination. The site is situated within the Article 4 Direction Area preventing change of use from office to residential without planning permission.

The site has policy constraints relating to heritage and potential loss of employment.

It is unknown whether the owners are willing to develop the site and it is presumed the workshops and premises are let on individual leases.

The site is considered to have potential for a mix of uses subject to mitigation.

Implied Site Density	75dph
Availability/Deliverability Issues	
Overall Site Location and	On a prominent corner position situated within the diverse North
Surroundings	Laine area, adjacent to a mix of uses, including residential, retail,
	public houses, and office.
Land ownership and control –	Privately owned. Brockhampton Land Ltd.
no constraints or complex	
multiple ownership	
Willingness of land owner to	Approved planning consent, with some conditions discharged,
develop site	however no actual ground works appear to have commenced on
	site.
Achievability	Achievable in short term (1-5years)

The site is located on a prominent corner position within the North Laine area. It is a cleared, vacant site with an approved planning consent for a mixed use development.

It is situated on sloping ground, with good, close access to local facilities including public transport, health, primary schools, local park, shops and utilities. Secondary schools are located some distance away. Health facilities and some primary schools appear to have capacity, however the catchment secondary school is over-subscribed. The site has good access to main A roads, although is some distance from the SRN.

The site is not within a Tall Building Corridor. It is within the Brighton Centre heat cluster opportunity area. The site is unlikely to have issues relating to road noise, flood risk, groundwater, biodiversity or geological designations, recreation, landscape.

or contamination.

The site is situated within the AQMA. The site may be contaminated based on former uses. The site is opposite a Grade II listed building, and is situated within the North Laine Conservation Area. The site is within ANA.

The site is situated within SA2 Central Brighton which supports a broad range of development types. The site has policy constraints relating to heritage and archaeology.

The site has an approved consent to deliver a mixed use scheme including 9 dwellings, retail and office and several applications to approve conditions have been decided, although no ground works appear to have commenced on site. It is considered that the size of the site could have potential a higher amount of housing than the planning consent. The site is considered to be suitable for a mix of uses.

Land ownership and control –	Brighton & Hove Hebrew Congregation	
no constraints or complex		
multiple ownership		

Willingness of land owner to	Some pre-application discussions suggest willingness to develop the
develop site	site
Achievability	Achievable in medium term (6-10 years)

The site is on a fairly prominent position on New Church Road, although the current buildings are partially screened by tree cover. The site is currently in use as a nursery and place of workshop (synagogue) used by the Brighton & Hove Hebrew Congregation. It is situated on level ground, with good close access to local facilities including primary schools, health, public transport, a retail centre (Hove) and reasonable access to recreation facilities and a train station. Some local primary schools appear to have capacity, as do health facilities. Secondary schools in the catchment have some future capacity due to an increase in the amount of pupils that can be taken from September 2018. The site has good road links, although is located some distance from the SRN.

The site is not within a Tall Building Corridor and is not within a Heat Network Opportunity Area. The site is unlikely to have any issues relating to biodiversity or geological designations, air quality, road noise, flood risk, groundwater pollution, landscape, and contamination.

Part of the site is covered by a TPO. The site is immediately adjacent to a Conservation Area, and a locally listed building, and fairly close proximity to listed buildings and an ANA. The site also contains some designated open space (school grounds typology), although these do not have any public access. The site has policy constraints relating to heritage, open space and loss of community facilities. Recent pre-application discussions suggest the owners are willing to develop the site. The site is considered to have potential for residential/with some community uses subject to mitigation.

no constraints or complex	recently acquired by McCarthy & Stone Developers.
multiple ownership	
Willingness of land owner to	Recent and previous planning applications indicate willingness to
develop site	develop site.
Achievability	Achievable in medium term (6-10yars)

The site currently consists of 5 detached dwellings on a fairly prominent roadside location, within the Patcham neighbourhood. The site has existing road access via Old London Road and is in very close proximity to the SRN.

The site has good, close access to bus services and local shops. A local park and schools are located within reasonable distance. Primary schools don't appear to have capacity; the catchment secondary has capacity. Health facilities are located some distance from the site.

The site is unlikely to have any issues with air quality, biodiversity or geological designations, recreation, landscape, contamination or utilities.

The site is in fairly close proximity to the Conservation Area and an ANA. The site has previously suffered from surface water flooding and is identified as having low-medium risk of surface water flooding. The site is within GSPZ 1. Part of the site suffers from high levels of road noise.

The site is not within a tall building corridor and is not located within a heat network opportunity area. There has been a recent unsuccessful planning application for the site, which suggests a willingness from the landowner to develop the site.

Site could have potential for residential uses subject to mitigation.

no constraints or complex	purchaser– McLaren Property
multiple ownership	
Willingness of land owner to	Pre-application discussions suggest owner is willing to develop site.
develop site	
Achievability	Achievable in medium term (6-10)

The site is situated within DA3. It is located in a cul-de-sac at the end of a residential street, with close access to the Lewes Road mixed-use commercial area, on level ground with good, close access to local facilities and services including health, recreation, shops, public transport, schools and utilities. Health facilities and some local primary schools appear to have capacity. Catchment secondary schools are over-subscribed. The site is situated on the edge of the Lewes Road Tall Building Corridor and has good access to main A roads and the SRN which is located approximately 3.7km.

The site is unlikely to have any issues relating to road noise, flood risk, groundwater, archaeology, geology, recreation or landscape.

The site is situated adjacent to the AQMA. The site may have potential for contamination due to current 'industrial' uses. The site is adjacent to the Woodvale Cemetery which is an SNCI and Historic Park & Garden, and therefore may have ecological and heritage impacts. It also adjoins a Grade II Listed Building.

The site is currently in use as B1/B8 uses and redundancy of the employment floorspace would need to be demonstrated if a change of use is proposed, in line with City Plan Part 1 Policy CP3. The owners appear willing to develop the site. The site could have potential for a mix of uses.

Overall Site Location and	On a prominent corner position situated within the diverse North

Surroundings	Laine area, adjacent to a mix of uses, including residential, open
	spaces, retail, public houses, office and car-parking.
Land ownership and control –	Privately owned.
no constraints or complex	
multiple ownership	
Willingness of land owner to	No planning applications have been submitted to redevelop the site.
develop site	Site owner may be looking to downsize business/redevelop site in
	the future.
Achievability	Achievable in medium term (6-10years)

The site is located on a prominent corner position within the North Laine, with the front of the building situated on Church Road. It is currently in use as an antiques trade centre. It is situated on sloping ground, with good, close access to local facilities including public transport, health, primary schools, local park, shops and utilities. Secondary schools are located some distance away. Health facilities and some primary schools appear to have capacity, however the catchment secondary school is oversubscribed. The site has good access to main A roads, although is some distance from the SRN. The site is not within a Tall Building Corridor. It is within the Brighton Centre heat cluster opportunity area. The site is unlikely to have issues relating to road noise, flood risk, groundwater, biodiversity or geological designations, recreation, landscape or contamination.

The site is situated within the AQMA. The site comprises a Grade II listed building, and is situated within the North Laine Conservation Area. The site is immediately adjacent to an ANA.

The site is situated within SA2 Central Brighton which supports a broad range of development types. The site has policy constraints relating to heritage and archaeology.

There have been no recent planning applications to redevelop the site. The site owner may be looking to vacate the site in the future. The site could be suitable for a mix of uses (such as workspace/retail/office) subject to mitigation.

184dph
10-14pii
In a prominent position on the corner of Buckingham Road,
Buckingham Street and Upper Gloucester Road, in a predominantly
residential area with very good access to various services located
within the city centre.
BHCC own the freehold
Buckingham Developments submitted planning application
Recent planning application suggests willingness to develop site.
Achievable in short term (1-5 years)
F

The site is in a fairly prominent corner position. It is currently vacant with the most recent use being health related. It is situated on a steeply sloping site with good, close access to local facilities including shops, primary schools, health, public transport including trains, and utilities. Some local primary schools appear to have capacity. The site has reasonable access to recreation and a main A road, although the SRN and secondary schools are some distance from the site. The catchment secondary school is over-subscribed.

The site is not within a Tall Building Corridor and is not within a Heat Network Opportunity Area, although is in close proximity.

The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, recreation, groundwater, landscape, contamination or road noise.

There is a low risk of surface water flooding on site and although the site is not within the AQMA it is immediately adjacent to the boundary.

The site is within a Conservation Area; numbers 76-79 being good examples of typical buildings found on Buckingham Road; number 80 is considered to be of detriment to the character of the Conservation Area. There is a grade II listed building in fairly close proximity.

The site has policy constraints relating to heritage and loss of community facilities.

The recent planning application suggests a willingness to develop the site.

The site is considered to be suitable for residential with some D1 uses in accordance with the planning consent.

Site Profile: 87 Preston Road, Brighton (former City College building)

Heritage Assets	Viaduct.
	87 Preston Road is a locally listed building. It is one of the surviving
	late-Victorian Brighton Board Schools designed by Thomas Simpson.
	It has architectural and historical interest, and having townscape
	interest occupying a prominent corner site on one of the main
	routes into the city.
	Not within a Conservation Area however Preston Park and Preston
	Village conservation areas are both c80m to the north of the site and
	there is a degree of inter-visibility between the site and the
	conservation areas.
Archaeological Value (ANA)	Part of site lies within Preston Park Villa ANA

0 11 0	

The site is situated within DA4. It is currently vacant and was formerly used by City College. It is located in a prominent position on Preston Road in close proximity to the commercial/retail areas of London Road. It is situated on level ground with good close access to local facilities and services including health, recreation, primary schools, shops, public transport and utilities. Health facilities and primary schools appear to have capacity however secondary schools within the catchment area are oversubscribed. The site has good access to main A roads, although is some distance from the SRN. The site is situated within a tall building corridor. It is not within a Heat Network Opportunity Area. The site is unlikely to have issues relating to biodiversity designations, geological designations, landscape, groundwater and has no recreational value.

The site is locally listed. It is also adjacent to the Grade II\* listed London Road Railway Viaduct and may be within the setting of the Preston Villa and Preston Park Conservations Areas. Part of the site lies within an ANA. The site is within the AQMA. The site suffers from high levels of road and will be subject to railway noise. The site is at risk of surface water flooding. It is unknown whether the site has any potential for contamination. The site has policy constraints relating to loss of community facilities and heritage. The site has recently gained planning consent for COU to provide 25 dwellings indicating that the owner is willing to develop the site. The site is suitable for residential development subject to mitigation.

no constraints or complex	
multiple ownership	
Willingness of land owner to	Extant planning permissions in place indicate willingness to develop
develop site	site.
Achievability	Achievable in short term (1-5 years)
Overall Summary	

The site is situated in a prominent seafront position in a predominantly residential area, on level ground. It has good access to local facilities including recreation, shops, bus services and utilities, and reasonable access to primary schools, health and train services. Secondary schools are located further away. Both health and primary schools appear to have capacity. Secondary schools in the catchment have some future capacity due to an increase in the amount of pupils that can be taken from

September 2018. The site has good access to main A roads. The SRN is located more than 4,000m away. The site is situated within the Western Seafront/Kingsway tall building corridor and within Hove Beachfront Heat Network Cluster Area.

The site is unlikely to have any issues relating to biodiversity designations, geology, groundwater pollution, recreation, landscape and contamination.

The site is within a Conservation Area and an ANA and may therefore have heritage constraints and archaeological interest. The site is adjacent to the AQMA and is subjected to high levels of road noise from the A259. The site has suffered a surface flooding incident and has a medium risk of surface water flood risk across the entire site.

The site is currently vacant and is cleared building site. The site has two extant planning permissions; one for 9 dwellings in a terrace, and one for 60 dwellings in 5-8 storey building, demonstrating willingness to develop site. Site considered suitable for residential dwellings subject to mitigation.

Overall Site Location and	Situated on a prominent position on Preston Road within the
Surroundings	Preston Park Conservation Area, in a predominantly residential area,
	with excellent road and public transport links, in close proximity to
	the SRN. The site is screened from the road by exiting trees.
Land ownership and control –	BHCC own the freehold. Application submitted by Southern Housing

no constraints or complex	group.
multiple ownership	
Willingness of land owner to	Recent planning application suggests willingness to develop site.
develop site	
Achievability	Achievable in short term (1-5 years)

The site is in a prominent roadside location on Preston Road although the buildings on the site are screened by tree cover. It is currently vacant, with its most recent former use as offices by BHCC Social Services. It is situated on level ground with good close access to local facilities including schools, recreation, public transport including a train station, a convenience store and utilities, and reasonable access to health facilities. Although the site has good access to a convenience store, the nearest local centre is located some distance away. Local schools within the area had no capacity on allocation day 17/18 and catchment secondary schools are over-subscribed. The site has good road links, being located on a main A road, with good access to the SRN.

The site is not within a Tall Building Corridor and is not within a Heat Network Opportunity Area. The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, air quality, recreation, landscape, groundwater or contamination.

The site is subject to high levels of road noise and is at varying risks of surface water flooding. The site is covered by a TPO. The site is within the Preston Park Conservation Area, although it is noted that the Character Statement for the Area does not feature the building as being notable. The site has policy constraints relating to heritage.

The recent planning application suggests the owner is willing to develop the site.

The site has potential for residential development subject to mitigation.

BHCC

	housing. Scheme yet to be approved by council committee.
Achievability	Achievable in short term (1-5 years)

The site consists 51 unused garages, which are no longer in use due to safety concerns. It is situated within the low-density residential neighbourhood of Hangleton. It has good access to the SRN and good, close access to fairly frequent local bus services, primary and secondary schools, recreation facilities, health facilities and utilities. There is a local shop located in the vicinity of the site, however a wider range of shops are located within reasonable distance at the Grenadier Local Centre. Primary schools and health facilities currently appear to have capacity. Secondary schools in the catchment have some future capacity due to an increase in the amount of pupils that can be taken from September 2018.

The site is not located within a tall building corridor and is not within a heat network opportunity area. The site is unlikely to have any issues relating to air quality, biodiversity designations, geological designations, landscape or contaminated land.

The site could have issues relating to road noise and flood risk, and is located within a groundwater source protection zone (3). The site is in fairly close proximity to some heritage assets, including listed buildings, Conservation Area and Scheduled Monument, although the site in its current form is not visible from these assets. The site is within an ANA. Site has policy constraints relating archaeology. The site is a council owned, and the council is looking to develop the site as part of the New Homes for Neighbourhoods scheme, which makes better use of council owned sites. Initial plans for the site include provision of 12 modular homes although this is yet to be approved by committee, however this shows willingness to develop the site. The site is therefore considered to have potential for residential uses subject to mitigation.

develop site		
Achievability	Within plan period.	
Overall Summary		

The site has existing access via Wellington Road, Church Street and St Peter's Road. The site has close access to many local facilities including bus services, primary schools, health, recreation and utilities. Shops are within reasonable distance. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, geological designations, recreation, landscape, heritage, groundwater pollution, or archaeology.

The site is situated within the AQMA. The site suffers from road noise and is also situated in close proximity to the working harbour, which may be a potential source of noise nuisance. The site could have potential for contamination based on the industrial area. Parts of the site have a high risk of surface water flooding.

The site comprises various poor quality buildings and is currently occupied by Hove Car Spares, a builder's merchants, a metal-works designers and amusement arcade distributors. Change of use on site should have regard to CPP1 CP3 regarding change in B uses. The JAAP describes the townscape in this location as being unsightly and run-down. Redevelopment could therefore help to regenerate the area.

The site is also site allocation SP6 within Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination. This allocates the site for mixed use development of residential at the rear and employment uses fronting Wellington Road. CA3 states that building heights up to 6 stories are considered to be acceptable at the front of the site.

The site is privately owned. There have been now recent applications to develop the site. Site is considered to have potential for residential and employment uses subject to mitigation.

develop site	Owners keen to redevelop Pelham Street campus with site put
	forward for redevelop during CPP2 Scoping Consultation.
Achievability	Achievable in longer term (11-15 years)

The site is situated within DA4. It is located within a mixed-use area, on level ground with good, close access to local facilities and services including health, recreation, shops, public transport, primary schools and utilities. Secondary schools are located further away. Health facilities and some primary schools appear to have capacity, however secondary schools in the catchment area are oversubscribed. The site is situated within a Tall Building Node and adjacent to a Tall Building Corridor. It is within the New England Quarter Heat Network Opportunity Area and has good access to main A roads, although is some distance from the SRN. The site is unlikely to have any issues relating to flood risk, biodiversity designations, geology, recreation, groundwater or landscape. It is unknown whether there are any contamination issues.

The site is adjacent to the North Laine Conservation Area, and could be within the setting of the St Bartholomew's Church Listed Building. It is also within an Archaeological Notification Area. The site is within the AQMA and adjacent to a road with high levels of traffic noise.

The site is currently in educational uses. Various policies would apply to any redevelopment of the site including those relating to loss of community facilities and heritage. The owners appear willing to redevelop the site. The site could have potential for a mix of uses subject to mitigation.

develop site	willingness to develop site. Recent planning application submitted.
Achievability	Achievable in short term (1-5 years)
Overall Summary	Achievable in Short term (1-3 years)
Overall Summary	

The site comprises the vacant former Dairy-crest depot. It is situated in a low density residential area, on level ground with existing road access and fairly good access to the SRN. The site has good access to some local facilities including convenience shop, public transport and recreation facilities. Local primary schools, secondary schools and health services are located within reasonable access. Health services appear to have capacity, however primary schools capacity varies. Secondary schools in the catchment have some future capacity due to an increase in the amount of pupils that can be taken from September 2018. The site has good access to a broadband exchange and is considered unlikely to have any issues regarding utilities.

The site is not within a Tall Buildings Corridor and is not within a Heat Network Opportunity Area. The site is unlikely to have any issues relating to air quality, road noise, biodiversity designations, geology, archaeology, recreation value, landscape, or contamination.

The site may have heritage constraints, as the site is on the Local List as a good example of early 19<sup>th</sup> century farm buildings. Although this site is not considered to be at high risk of flooding, there has been a surface water flooding incident recorded in close proximity to the site, and The Droveway has medium risk of surface water flooding. The site is situated within a groundwater source protection zone (2).

The site has some policy constraints relating to loss of B8 units and heritage constraints (Local List). The site is currently vacant. It was put forward during a call for sites exercise and a recent planning application is under consideration for a mixed use scheme, suggesting willingness to develop the site. The site could have potential for a mix of uses, with predominantly residential uses, subject to mitigation.

	sites.
SHLAA Analysis (where relevant)	
Site Capacity	33
Implied Site Density	82
Availability/Deliverability Issues	
Overall Site Location and	Situated within a low density residential area, with fairly good access
Surroundings	to the SRN and some local services and facilities.
Land ownership and control –	Southern Housing/Perth Securities
no constraints or complex	
multiple ownership	
Willingness of land owner to	Recent planning application suggests willingness to develop site.
develop site	
Achievability	Achievable in short term (1-5 years)

The site consists of the Downsman Pub (closed) and an area of undeveloped open space surrounding the site which is designated as open space (countryside). It is situated within the low-density residential neighbourhood of Hangleton. It has good access to the SRN and good, close access to fairly frequent local bus services, primary and secondary schools, recreation facilities, health facilities and utilities. There is a local shop located in the vicinity of the site, however a wider range of shops are located within reasonable distance at the Grenadier Local Centre. Primary schools and health facilities currently appear to have capacity. Secondary schools in the catchment have some future capacity due to an increase in the amount of pupils that can be taken from September 2018.

Part of the site has been levelled, whereas the undeveloped open space follows the natural gradient of the hill with a c.5m change in gradient across the site. The site is not located within a tall building corridor and is not within a heat network opportunity area.

The site is unlikely to have any issues relating to air quality, biodiversity designations, geological designations, or landscape.

The pub is registered as an ACV, and therefore had some community value, and the adjoining open space may have had some recreational value. The site could have issues relating to road noise and flood risk. Site investigation report suggested presence of some contaminants that would require remediation.

The site is in fairly close proximity to some heritage assets, including listed buildings, Conservation Area and Scheduled Monument, although it is recognised that a Heritage Impact Assessment submitted as part of the planning application suggested that the development would not have adverse effects on these assets.

The site is within the Hangleton ANA. The Heritage Impact Assessment submitted as part of the planning application suggested that the site had high potential for archaeological remains. The site is located within a groundwater source protection zone (3). Site has policy constraints relating to loss of open space, loss of community facilities and archaeology.

There is a current planning application which has recently been approved, which demonstrates the owner is willing to develop the site. The site has potential for predominantly residential uses with some D uses in accordance with its planning consent, subject to mitigation.

develop site	Neighbourhoods programme, which brings back into used under-
	used council owned sites. Council committee approved a scheme to
	develop modular housing on the site. No planning application
	submitted yet.
Achievability	Achievable in short term (1-5years)

The site is situated within DA3. The site is accessed via a road that leads to part of the Fairways industrial estate and is situated within a mixed-area which includes industrial uses as well as some flatted residential development.

The site has been levelled to some extent although slopes up in an easterly direction, and has good, close access to local facilities including primary and secondary schools, public transport, a convenience store, and recreation. Local schools appear to have capacity. The site has also good access to main A roads and the SRN. Although, the site has good access to a convenience store, the nearest retail parade is the Lewes Road District Centre, located some distance from the site. The nearest doctors surgery is also located some distance from the site. The site is situated some distance from the nearest broadband exchange and is unlikely to have utilities on site due to its former use as garages, however utilities are likely to be within close proximity serving the surrounding neighbourhood. The site is unlikely to have any issues relating to biodiversity, geological and archaeological designations, air quality, flooding, recreation, landscape, or heritage. The site is not within a tall building corridor or a heat network opportunity area.

The site is situated within close proximity to an industrial estate which could result in noise nuisance both from uses on site as well as vehicles accessing the site. The site is also considered to have potential for contamination. The site is situated within GSPZ 2.

The site is a council owned garage site, consisting of 2 remaining garages. The site also currently contains storage containers and is uses by the Mears group for storage and parking. The council is looking to develop the site as part of the New Homes for Neighbourhoods scheme, which makes better use of council owned sites. Council committee has approved modular type-housing to be delivered on this plot leased by YMCA to young people. The site is therefore considered to have potential for residential uses subject to mitigation.

Achievability	Within 5-10 year period (medium term).
Overall Summary	

The site has existing access via North Street and Clarendon Road and has good, close access to many local facilities including bus and train services, primary schools, health, shops, recreation and utilities. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, geology, recreation, landscape, heritage, groundwater pollution, road noise or archaeology.

The site is situated within the AQMA. It is also situated in close proximity to the working harbour, and within an industrial estate which may be a potential source of noise nuisance. The site could have potential for contamination based on the former industrial area.

The site is currently used as a car-wash and occupied by two gyms. Change of use on site should have regard to policy HO20 regarding loss of D uses and CPP2 CP3 regarding change in B uses.

The site is situated within the South Portslade Industrial Area, which is designated as a Strategic Employment/Mixed-use Area, including for some residential within CPP1 DA8. It is also site allocation SP5 within the Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination; this allocates the site for mixed use development of residential and employment uses with employment uses on the ground floor and residential uses on the upper floors. Some D uses also permitted provide compatible with other B and C uses. CA3 states that building heights up to 6 storeys are considered to be acceptable.

The JAAP describes the townscape in this location as being unsightly and run-down. Redevelopment could therefore help to regenerate the area.

The site is privately owned. There have been recent applications to develop the site, however not any residential uses.

Site is considered to have potential for residential and employment uses subject to mitigation.

	playing fields and some of the school buildings within them.	
Heritage Assets	The site contains Grade II listed buildings (the school and chapel),	
	various curtilage listed buildings, as well as the flint wall fronting the	
	High Street. The part of site which contains the school buildings is	
	situated within the Rottingdean Conservation Area. The playing	

_	
	fields are adjacent to the Conservation Area with the twitten
	forming the boundary. The playing fields are an important part of
	the setting of the conservation area (Rottingdean Conservation Area
	Character Statement).
Archaeological Value (ANA)	Part of site within Rottingdean ANA
Contamination/remediation or	Phase 1 Desk Study undertaken for 2015 planning application
geological issues	identified potential metal, asbestos and PAH contamination
	associated with the existing buildings.
	Geo report concludes that one sample of topsoil had elevated levels
	of lead beyond the screening value for a residential end use. Survey
	concluded that additional work may be required.
Topography and gradients	The site is located on a sloping hillside that rises west to east from
	the valley floor. There is a level change of 5 metres between the
	school's main building and the middle of the playing fields. This
	change in levels accounts for the predominance of garden terracing
	to the east and rear of the school building.

Overall Summary	ttingdean Neighbourhood Plan area and is located in a predominantly

The site is situated within the Rottingdean Neighbourhood Plan area and is located in a predominantly low density residential area. The principle of redeveloping the former school campus part of the site has been accepted and a Planning Brief has been produced by the Council to provide detailed guidance

to potential developers. The site has good access to primary schools, doctors, local shops, and recreation. Health facilities and some local primary schools appear to have some capacity. The catchment secondary has capacity.

The site is not in close proximity to the SRN, nor any train stations, however does have good access to regular bus services that link Rottingdean to Brighton and villages along the coast to the east. The site is unlikely to have any issues relating to flood risk, groundwater or ecological designations. The site is not located within a tall building corridor and is not located within a Heat Network Opportunity Area. The site is located within fairly close proximity to the Brighton to Newhaven Cliffs SSSI although residential development one the site would be unlikely to have any issue on the SSSI. The site contains numerous heritage assets including listed buildings and is situated within the Rottingdean Conservation Area. The site is also within the Rottingdean ANA. The site is prominent and visible from the SDNP (Beacon Hill) and therefore may have high landscape sensitivity. The site may also have previously provided some recreation value due to the open space although it is noted that there is no over-riding deficiency in open space within the ward. The site is within fairly close proximity to the AQMA and the southern part of the site may be subject to high levels of road noise. Recent land surveys suggests there may be potential for some land contamination on site.

The site has a change in gradient across the site, which may need to be overcome and there is currently limited road access. There is an adopted planning brief for the site. The site has numerous policy constraints.

The site has a current planning application under consideration which demonstrates willingness to develop the site. The site has potential for some residential uses subject to mitigation.

O II C		

Although not currently particularly visible from the A259, the site is situated on a fairly prominent position on the A259 Wellington Road, opposite the harbour. The site has existing access via Clarendon Road and has good, close access to many local facilities including bus and train services, primary schools, health, shops, recreation and utilities. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, geology, recreation, landscape, heritage, groundwater pollution, archaeology or contamination.

The site is situated within the AQMA and is subject to high levels of road noise. It is also situated in close proximity to the working harbour, and within an industrial estate which may be a potential source of noise nuisance. The site was formerly used as a day care centre and therefore change of use on site should have regard to policy HO20 of the Brighton & Hove Local Plan prior to the adoption of the JAAP.

The site is situated within the South Portslade Industrial Area, which is designated as a Strategic Employment/Mixed-use Area, including for some residential within CPP1 DA8. It is also site allocation SP2 within the Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination; this allocates the site for residential development up to six storeys in height. Upon adoption of the JAAP it will update and supersede the key employment site designation currently in place by virtue of policy DA8 of CPP1.

The JAAP describes the environment of Wellington Road as stark, and although benefiting from views of the harbour, the A259 suffers from weak frontages and buildings on the north side, poor quality public realm and lack of frontage on the south. The townscape environment in this location is described as being unsightly and run-down. Redevelopment could therefore help to regenerate the Wellington Road street-front in this area and improve the designated Green Corridor between the road and the site.

The site is owned by BHCC and has been identified as a one of the priority sites within a Joint Venture Initiative (BHCC working with Hyde New Homes) to deliver 1,000 affordable homes across the city which shows willingness to develop the site.

Site is considered to have potential for residential uses subject to mitigation.

# Site Profile Former Brewery site, South Street, Portslade

develop site	
Achievability	Achievable in the short term (1-5years)
	·

The site is situated in a prominent position in Portslade old village amongst a mix of uses. It comprises a landmark building which makes a positive contribution to the Portslade Conservation Area and which can be seen in distant views. The site is currently vacant.

The site has existing access via Drove Road and has good, close access to some local facilities including primary schools, secondary schools, bus services, a convenience store, recreation and utilities; and reasonable access to health services, a local centre and the SRN. Primary schools, some secondary schools and health facilities appear to have capacity.

The site is unlikely to have any issues with biodiversity and geological designations, groundwater pollution, air quality, and road noise. The site is not within a tall building corridor, or a heat network opportunity area.

The site may be at risk of surface water flooding and may have potential for contamination due to former uses.

The site is within the Portslade Old Village Conservation Area. The brewery building and tower is described as a local landmark in the Conservation Area Character Statement making a positive contribution to the Area. It is a locally listed building and lies within close proximity to numerous listed buildings. It is in fairly close proximity to the remains of the Old Manor House Scheduled Monument and is within the Portslade ANA. The site therefore has heritage policy constraints that would need to be overcome. The site is also an unallocated secondary employment site and therefore policy CP3.5 would apply.

The site has recently been granted planning permission, demonstrating willingness to re-develop the site. The site is considered to be suitable for mixed uses, subject to mitigation.

develop site	Neighbourhoods programme, which brings back into used under-
	used council owned sites.
Achievability	
Overall Summary	

The site comprises the former Hollingbury library and has been vacant since October 2017. It is situated on a corner position within an established low density neighbourhood and has existing road access. The sites slopes in both a west to east and south to north direction and has undergone some

previous levelling.

The site has good, close access to some local facilities including local convenience store, primary schools, public transport, GP surgery and recreation. Secondary school is located further away. Primary school and GP facilities have capacity, however the nearest secondary school was oversubscribed in 2017/2018. The site should have good access to broadband and should have existing utilities on site.

The site is unlikely to have any issues with biodiversity, geological or archaeological designations, air quality, road noise, flooding, groundwater, recreation, landscape or heritage. The site is not within a tall building corridor or a heat network opportunity area.

The site has policy constraints relating to loss of community facilities, although it is recognised that the library provision has been re-provided elsewhere within the neighbourhood and loss of open space, although it is noted there is no over-riding deficiency in open space within the ward or sub-area. The site is a council owned site and the council is looking to develop the site as part of the New Homes for Neighbourhoods scheme, which makes better use of council owned sites. Site therefore considered to have potential for residential uses.

Land ownership and control -	BHCC ownership
no constraints or complex	
multiple ownership	
Willingness of land owner to	Site being considered as a possible redevelopment opportunity
develop site	under New Homes for Neighbourhoods scheme, including potential
	to re-provide the bowling green within the nearby Victoria Park.
Achievability	Achievable in short term (1-5years)
Overall Summary	

The site is set-back from the roadside, located to the rear of Portslade Town Hall and is in current use as a Housing Office as well as incorporates a public bowling green (outdoor sports open space). It is situated on level ground, has existing road access and good, close access to various services including public transport (bus and rail), primary schools, health, shops, recreation and utilities. The nearest secondary school is located at a reasonable distance however the catchment secondary is located further away. Health facilities, primary and the catchment secondary all appear to have capacity. The site has good access to main A roads and reasonable access to the SRN. The site is not within a tall building corridor. The site is within the Shoreham Harbour Heat Network Cluster opportunity area. The site is unlikely to have any issues regarding air quality, road noise, biodiversity designations, groundwater pollution, geological designations, landscape, contamination and heritage, although it is noted the site is adjacent to a locally listed building.

A previous flooding incident on the site has been recorded, and the site has a low to medium risk of surface water flooding. Part of the site currently has recreational value, as is in use as a bowling green, and it is noted there is an overall deficiency in open space across the ward. Although not within an ANA the site is in very close proximity.

The site has policy constraints relating to land in employment uses and open space.

The site is owned by BHCC and is being considered as a possible redevelopment opportunity under the New Homes for Neighbourhoods scheme including re-provision of the bowling green on an alternative site.

The site could have potential for residential uses subject to mitigation.

0	

The site is situated in a prominent seafront position in a predominantly residential area, on level ground with good, close access to some local facilities including recreation, shops, bus services and utilities, and reasonable access to rail services, health facilities and primary schools. Health facilities and primary schools appear to have capacity. Secondary schools in the catchment have some future capacity due to an increase in the amount of pupils that can be taken from September 2018. The site has good access to main A roads, although the SRN is some distance away.

The site is not within a tall building corridor and is not within a Heat Network Opportunity Area. The site is unlikely to have any issues relating to biodiversity designations, geology, archaeology, recreation, landscape, groundwater and contamination.

The site is a Grade II listed building and is situated within a Conservation Area. The site is within the AQMA and adjacent to a road with high levels of traffic noise. The site has recently suffered from a surface water flooding incident. The site has various policy constraints relating to heritage and former use as B1 office space.

The site is currently vacant and has been recently sold. The site is likely to come forward for redevelopment. The site could have potential for a mix of uses subject to mitigation.

Overall Site Location and	Situated within the harbour area at lower level on Basin Road North
Surroundings	and along Kingsway on the upper level of the site, adjacent to a
	residential area. Site comprised of a range of buildings which are in
	use.
Land ownership and control –	In various ownership.
no constraints or complex	
multiple ownership	
Willingness of land owner to	Some applications for development on parts of the site have been
develop site	approved suggesting willingness to develop parts of the site.
Achievability	Within short term (1-5year supply)
O	

The site has existing access via Basin Road North and Kingsway. It has good access to bus services, a convenience store and opportunities for recreation. Other services including schools and health are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, geological designations, recreation, landscape, heritage, groundwater pollution, or archaeology.

The site is situated within the AQMA. It has high levels of road noise and is adjacent to the working harbour, which may be a potential source of noise nuisance. Parts of the site could have potential for contamination based on the surrounding industrial area. Parts of the site (on Basin Road North) are in flood zone 3 – high risk of tidal flooding.

The site comprises numerous buildings which are currently in use and occupied by a range of business including a clothes shop, pet shop, kitchen showroom and architects. Any change of use on site should have regard to CPP2 CP3.

The site is allocated as AB4 within the Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination.; this allocates the site for mixed use development of residential, employment and retail uses with employment uses on the lower floors, retail on the ground floor and residential uses on the upper floors.

The site is privately owned in various ownership. There have been various applications to develop parts of the site including the 'Portzed' development to deliver 52 dwellings as well as commercial floorspace which currently has planning consent, suggesting that the owners of this part of the site are willing to develop it. Some other parts of the site also have planning consent where building works have commenced.

Site is considered to have potential for residential and employment uses subject to mitigation

SHLAA Analysis (where relevant)	
Site Capacity	10
Implied Site Density	50dph
Availability/Deliverability Issues	

Overall Site Location and Surroundings	Greenfield site within the residential area of Mile Oak, on the edge of the built up area with close proximity to the SDNP. Site has good links to the SRN and has some local services within fairly close proximity.
Land ownership and control – no constraints or complex multiple ownership	One owner.
Willingness of land owner to develop site	Site put forward by owner during Call for Sites exercise 2016 as being suitable for residential development.
Achievability	Achievable in short term (1-5 years)

The site is privately owned open space of the amenity -greenspace typology. It is situated on the edge of the built up area boundary, adjacent to the SDNP, within an existing residential area of fairly low density. It has good access to the SRN and has good access to a regular bus service, schools, local shopping parade and recreation. Health facilities and local schools appear to have capacity. More extensive retail and health facilities can be found further away within Mile Oak or within the South Portslade District Centre.

The site is in a fairly exposed and elevated position and has a gently sloping gradient. The site is not located within a tall building corridor and is in a prominent position adjacent to the SDNP, potentially having landscape sensitivities, although is located within an established residential setting. The site is not located within a Heat Network Opportunity Area.

The site is unlikely to have any issues relating to air quality, road noise, flood risk, groundwater pollution, ecological designations, geological designations, contamination, heritage or archaeological designations, although there is an ANA in fairly close proximity to the site. Although the site is designated open space, it is privately owned and unknown whether access is permitted and therefore whether it has recreational value.

The site has policy constraints relating to biodiversity and open space, with it noted that the North Portslade ward has an overall deficiency in open space, including the -amenity greenspace typology. The site was put forward most recently during the 2016 Call for Sites exercise which suggests the owner is willing to develop the site. The site could have potential for some residential uses subject to mitigation.

develop site	
Achievability	Achievable in long-term (11-15 years)
Overall Summary	
-	

The site is centrally located and is currently used as a car park. It is situated within a mixed use area, on level ground, with good, close access to local facilities and services including health, recreation, primary schools, shops, public transport and utilities. Health facilities and some primary schools appear to have capacity, however secondary schools in the catchment are over-subscribed. The site has good access to main A roads, however is some distance from the SRN. The site has no recreational value and is unlikely to have any issues regarding flood risk, groundwater, biodiversity designations, geological or archaeological designations and landscape.

The site is situated within the AQMA and is subject to high levels of road noise. The site is situated within a Conservation Area and is in close proximity to numerous Grade II listed buildings. The site is not situated within a tall building corridor or a heat network opportunity area. The site could have policy constraints relating to heritage assets. The site could have potential for a mix of uses subject to mitigation.

	in occupation until mid 2020 and sale subject to a delayed
	completion).
Achievability	-
Overall Summary	

The site is in a fairly prominent position on the Old Shoreham Road, on level ground, with good access to the road network, including fairly good access to the SRN. It is currently in use as a car showroom/car-service centre. It has good, close access to some local facilities including public transport (bus and rail), primary schools, a convenience store and utilities, and reasonable access to a

park, health facilities and a secondary school. Primary schools appear to be at capacity. The catchment secondary schools have some capacity due to an increase in the number of pupils they can take. Health facilities locally have capacity.

The site is not considered suitable for a tall building and is on the edge of the Hove Park heat cluster opportunity area. The site is unlikely to have any issues relating to biodiversity and geological designations, flood risk, air quality, recreation, landscape, heritage or utilities.

The site may have potential for contamination due to former uses. The site is within a Groundwater Source Protection Zone 2. The site is within an ANA. The site suffers from high levels of road noise. There have not been any recent planning applications to redevelop the site.

The site has policy constraints relating to archaeology.

Site could be considered as having potential as an extension to the existing adjacent industrial alongside residential development, subject to mitigation.

develop site	
Achievability	Achievable in long term (11-15years)

The site appears to be in use as a car-servicing garage, as well as garages. It is enclosed behind terraces of houses in the low-rise, high density residential area of Hanover. The site is situated on sloping ground and has existing road access as well as good, close access to various services including bus services, convenience store as well as a retail centre, recreation, health and utilities reasonable access to primary schools. The catchment secondary school is located some distance away. Primary and secondary schools within the area appear to be at capacity or over-subscribed. Health facilities have capacity. The site has good access to a main A road, although is some distance from the SRN.

The site is not within a tall-building node or a heat network opportunity area.

The site is unlikely to have any issues relating to biodiversity, geological or archaeological designation, air quality, road noise, groundwater, landscape, recreation, or heritage.

The site may have some issues relating to flood risk and contamination.

The site may have policy constraints relating to loss of employment uses, depending on the current use of the site.

There have been no relevant planning applications submitted for the site and it is unknown whether the owners are willing to develop the site.

The site could have potential for some residential uses subject to mitigation.

no constraints or complex	

multiple ownership	
Willingness of land owner to	Recent planning application suggests willingness to develop site.
develop site	
Achievability	Achievable in short term (1-5 years)
Overall Cumment	

The site is in a fairly prominent position on Montpelier Place, and also extends up York Avenue and Norfolk Terrace. The site consists of the former Baptist Church, which has now closed and as such is vacant and has become derelict and subject to vandalism, and the associated car-park. It is situated on sloping ground that rises in a northerly direction with good close access to local facilities including health, primary schools, shops, recreation, public transport and utilities. Catchment secondary schools are located some distance from the site. Local primary schools and health facilities appear to have capacity and the catchment secondary schools appear to have capacity due to an increase in the amount on pupils that can be taken. The site has reasonable access to main A roads, although is situated some distance from the SRN.

The site is not within a Tall Building Corridor and is not within a Heat Network Opportunity Area. The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, air quality, road noise, flood risk, groundwater, recreation, landscape, or contamination.

The site is situated within the Montpelier and Clifton Hill Conservation Area, opposite the Brunswick Town Conservation Area and adjacent to and opposite Grade II listed buildings and a locally listed building, and therefore may have heritage impacts.

The site may have policy constraints relating to heritage and loss of community facilities if these are not brought forward as part of a mixed use scheme.

There is a current planning application for the site, which has been approved, which suggests the owners are willing to develop the site. Site is considered suitable for predominantly residential uses.

multiple ownership	
Willingness of land owner to	Recent planning application /consent suggests willingness to
develop site	develop site.
Achievability	Short term (1-5years)
Overall Summary	Short term (1 Sycars)
Overall Julilliary	

The site is centrally located and is currently used as car park and staff accommodation for the hotel. It is situated within a mixed use area, on level ground, with good, close access to local facilities and services including health, primary schools, shops, public transport and utilities. Health facilities and some primary schools appear to have capacity. Secondary schools are located further from the site and

are over-subscribed. The site has good access to main A roads, however is some distance from the SRN.

The site has no recreational value and is unlikely to have any issues regarding flood risk, groundwater, biodiversity designations, geological designation and landscape.

The site is situated within the AQMA and is subject to high levels of road noise. The site is situated within a Conservation Area and is adjacent to a listed building. The site itself is locally listed and is also within an Archaeological Notification Area.

The site is not situated within a tall building area or a heat network opportunity area. The site could have policy constraints mainly relating to heritage assets.

The site currently has an approved planning consent to deliver 18 dwellings demonstrating willingness to develop part of the site. Site considered to have potential for residential development subject to mitigation.

SHLAA Analysis (where relevant)	
Site Capacity	110
Site Capacity	110

Implied Site Density	220dph
Availability/Deliverability Issues	
Overall Site Location and	The site is situated within the North Laine mixed use area,
Surroundings	comprising residential, retail and commercial services, with good
	access to various services.
Land ownership and control –	Royal Mail
no constraints or complex	
multiple ownership	
Willingness of land owner to	No applications to develop the site have been submitted.
develop site	
Achievability	Achievable in medium to long term (6-15 year supply).

The site covers a fairly large area within the North Laine, with the front of the building situated on North Road and the back of the building situated on Gloucester Road. The front of the building is a fairly prominent building on the streetscape; the rear of the building is described as detracting from the conservation area within the North Laine Conservation Area study. It is currently in use as the post office sorting office.

The site is situated on sloping ground, with good, close access to some local facilities including public transport, health, primary schools, shops, local park and utilities. Secondary schools are located some distance away. Some primary schools have capacity, as do health facilities. Secondary schools are oversubscribed. The site has good access to main A roads, although is some distance from the SRN. The site is not within a Tall Building corridor. The site is unlikely to have issues relating to road noise, recreation, landscape, groundwater, biodiversity, geological or archaeological designations. The site is partially situated within the AQMA. There has been a surface water flooding incident on site and the site is situated adjacent to areas with varying levels of surface water flood risk. The site is situated within the North Laine Conservation Area and within close proximity to some listed buildings. The site is situated within SA2 Central Brighton area which supports a broad range of development types. The site has policy constraints relating to heritage and loss of employment.

There have been no recent planning applications to redevelop the site and it is unknown whether the

owners will seek to develop the site. The site could be suitable for a mix of uses subject to mitigation.

Preston Park Hotel Ltd  Recent planning application suggests willingness to develop site.

hotel core zone so not protected by City Plan Part One Policy CP6). It is situated on level ground with

good close access to local facilities including schools, recreation, public transport including a train station, a convenience store and utilities, and reasonable access to health facilities. Although the site has good access to a convenience store, the nearest local centre is located some distance away. Local schools within the area had no capacity on allocation day 17/18 and secondary schools are oversubscribed. The site has good road links, being located on a main A road, with good access to the SRN. The site is not within a Tall Building Corridor and is not within a Heat Network Opportunity Area. The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, air quality, recreation, landscape, groundwater or contamination.

The site is subject to high levels of road noise and is at varying risks of surface water flooding. The site is covered by a TPO. The site is within the Preston Park Conservation Area, although it is noted that the Character Statement for the Area does not feature the building as being notable. The site has policy constraints relating to heritage.

The recent planning application demonstrates willingness to develop the site.

The site has potential for residential development.

Willingness of land owner to	Unknown. No recent planning applications to develop site.
develop site	
Achievability	Within plan period.

The site has existing access via North Street and Clarendon Road and has good, close access to many local facilities including bus and train services, primary schools, health, shops, recreation and utilities. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, geology, recreation, landscape, heritage, groundwater pollution, road noise or archaeology.

The site is situated within the AQMA. It is also situated in close proximity to the working harbour, and within an industrial estate which may be a potential source of noise nuisance. The site has potential for contamination based on current use as car-service garage.

The site is currently used as a dance studios and car-service garage. Change of use on site should have regard to policy HO20 of the Brighton & Hove Local Plan prior to the adoption of the JAAP and also CPP2 CP3.

The site is situated within the South Portslade Industrial Area, which is designated as a Strategic Employment/Mixed-use Area, including for some residential within CPP1 DA8. It is also site allocation SP1 within the Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination; this allocates the site for mixed use development of residential and employment uses. CA3 states that building heights up to 6 storeys are considered to be acceptable.

The JAAP describes the townscape in this location as being unsightly and run-down. Redevelopment could therefore help to regenerate the area.

The site is privately owned. There have been no applications to develop the site.

Site is considered to have potential for residential and employment uses subject to mitigation.

Achievability	Within plan period.

The site has existing access via North Street and Clarendon Road and has good, close access to many local facilities including bus and train services, primary schools, health, shops, recreation and utilities. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, geology, recreation, landscape, heritage, groundwater pollution, road noise or archaeology.

The site is situated within the AQMA. It is also situated in close proximity to the working harbour, and within an industrial estate which may be a potential source of noise nuisance. The site could have potential for contamination based on the surrounding industrial area.

The site is currently used as a soft furnishings wholesale and distributors. Change of use on site should have regard to CPP2 CP3.

The site is situated within the South Portslade Industrial Area, which is designated as a Strategic Employment/Mixed-use Area, including for some residential within CPP1 DA8. It is also site allocation SP4 within the Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination; this allocates the site for mixed use development of residential and employment uses with employment uses on the ground floor and residential uses on the upper floors. CA3 states that building heights up to 6 storeys are considered to be acceptable.

The JAAP describes the townscape in this location as being unsightly and run-down. Redevelopment could therefore help to regenerate the area.

The site is privately owned. There have been no applications to develop the site.

Site is considered to have potential for residential and employment uses subject to mitigation.

Land ownership and control –	Unknown however presumed no issues due to planning consent.		
no constraints or complex			
multiple ownership			
Willingness of land owner to	Yes. Recent planning consent and some demolition and site		
develop site	preparation works indicates willingness to develop site.		
Achievability	Achievable in short term (1-5 years)		

The site is situated on the edge of the SA3 Valley Gardens Special Area. The site is centrally located in close proximity to the Central Brighton commercial and regional centre. The site itself has been levelled by previous developments and has existing road access as well as good close access to local facilities and services including health, recreation, primary schools, shops, public transport and utilities. Health facilities and some local primary schools appear to have capacity. Catchment secondary schools are located some distance from the site and are over-subscribed. The site has good access to main A roads, although is some distance from the SRN.

The site is not within a tall building node or corridor.

The site is within the Edward Street Heat Network Cluster Area.

The site is unlikely to have any issues relating to road noise, biodiversity, archaeological or geological designations, groundwater, landscape, and has no recreational value.

The site is immediately adjacent to several Grade II listed buildings on Grand Parade, and also immediately adjacent to the Valley Gardens Conservations Area. The site is within the AQMA. The site is at risk of surface water flooding. The site may have potential for contamination.

The site may have policy constraints regarding heritage and loss of employment (which would have been addressed by planning permission BH2010/03791)

The site has an extant planning consent for development to provide 49 dwellings, with some site clearance having taken place and some pre-commencement conditions discharged, indicating that the owner is willing to develop the site. The site is suitable for residential development, subject to mitigation.

	and incapable of meeting alternative employment needs. Priority for
	re-use will be for alternative employment or housing.
SHLAA Analysis (where relevant)	
Site Capacity	30

Implied Site Density	600dph
Availability/Deliverability Issues	
Overall Site Location and	Located within a predominantly residential area along Lewes Road.
Surroundings	Located on main A road with various good transport links.
Land ownership and control –	внсс
no constraints or complex	
multiple ownership	
Willingness of land owner to	Yes. A scheme for Selsfield Drive Housing Office was approved by
develop site	Housing & New Homes Committee on 02/03/16 consisting of 27 flats
	in a six storey building. No planning application submitted as yet.
Achievability	Achievable in short-term (1-5 years)

The site is situated within DA3 within an established residential estate. It is on level ground with good, close access to some local facilities including public transport, schools, health, and a convenience store. Health facilities and both primary and catchment secondary schools appear to have capacity. A wider variety of shops and services are located with Lewes Road District Centre c.1,200m. The surrounding estate includes numerous areas of amenity greenspace, however the nearest equipped play-space is located c.1,000 away across Lewes Road.

The site is situated within the Lewes Road tall building corridor, is in close proximity to the University Heat Network Opportunity Area and has good access to main A roads and the SRN.

The site is unlikely to have any issues with biodiversity designations, heritage, geology, recreation, landscape, air quality, contamination, flood risk or access to utilities.

The site is adjacent to a major road and is subject to high levels of traffic noise. The site is adjacent to an area of trees which are subject to a TPO. The nearest broadband exchange is located >2,800m away, which may impact on connectivity. The site is situated within GSPZ 2.

Any change of use would need to meet the policy tests of City Plan Part One Policy CP3.5 regarding proving redundancy. The site is owned by BHCC and is currently in temporary use as storage, with the housing office relocated to Moulsecoomb Library. The site has committee agreement to be redeveloped to provide 27 flats. Site has potential for residential uses subject to mitigation.

The site is in a prominent road-side position and is in current use as storage and suppliers of plastic building products. The site has existing access via Church Road, and has good, close access to local facilities and services including bus and train services, primary schools, health, shops, recreation and

utilities. Secondary schools are located further away. Both primary and secondary catchment schools and health facilities appear to have capacity. The site has good access to main A roads and reasonable access to the SRN. The site is not within a tall building corridor. The site is within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, groundwater pollution, geological designations, recreation, landscape, and heritage.

The site is situated within the AQMA and is subject to high levels of road noise. The site is fairly close proximity to an ANA. The site may have potential for contamination due to current uses. The site is an unallocated secondary employment site and therefore City Plan Part One Policy CP3.5 would apply. There have not been any recent planning applications for the site and it is unknown whether the owners are willing to develop the site.

The site could have potential for a mix of uses subject to mitigation.

develop site	
Achievability	Within plan period.

The site is located on Station Road/Boundary Road and has good, close access to many local facilities including bus and train services, primary schools, health, shops, recreation and utilities. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Station Road/Boundary Road tall building area, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, geology, recreation, landscape, heritage, groundwater pollution, road noise or archaeology.

The site is situated within the AQMA. The site could have potential for contamination based on the current uses.

The site is currently used as a car-service centre. Change of use on site should have regard CPP2 CP3 regarding change in B uses.

The site is adjacent to the South Portslade Industrial Area which is located at the rear of the site. It is a site allocation SP7 within the Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination; this allocates the site for mixed use development of residential, retail and employment uses. CA3 states that building heights up to 3 storeys are considered to be acceptable.

The site is privately owned. There have been no recent applications to re-develop the site.

Site is considered to have potential for residential and employment uses subject to mitigation.

Willingness of land owner to	BHCC owned site, likely to come forward as part of New Homes for
develop site	Neighbourhoods programme, which brings back into used under-
-	used council owned sites.
Achievability	
•	

The site is owned by BHCC and is a designated open space of the children's playspace typology. It has been cleared of play equipment and is not in use.

The site has good, close access to opportunities for recreation, regular bus services and a convenience store and reasonable access to a primary school and health facilities. The catchment secondary school is located some distance away, as is the nearest junction of the SRN. Schools and health facilities within the area appear to have capacity. There are unlikely to be any utilities on site and although the site is adjacent to a road there is no existing road access onto the site.

The site is unlikely to have any issues with biodiversity, geological or archaeological designations, GSPZ, air quality, road noise, surface water flood risk or contamination. The site is in fairly close proximity to the SDNP, however is situated within an existing urban context. The UFFA 2015 concluded that any development in this location that broke the ridge-line would be likely to have landscape impacts. The site is not within a tall building corridor however is situated adjacent to existing taller buildings. The site is not located within a Heat Network Opportunity Area.

The site has policy constraints relating to loss of loss of open space, although it is noted there is no over-riding deficiency in open space within the ward or sub-area and a children's playground has been re-provided in close proximity to the site on Whitehawk Way. The site may have policy constraints relating to landscape.

The site is a council owned site and the council is looking to develop the site as part of the New Homes for Neighbourhoods scheme, which makes better use of council owned sites. Site therefore considered to have potential for residential uses.

Achievability	Achievable in short term (1-5years).	
Overall Summary		

A vacant listed building within the Valley Garden Conservation Area and Special Area, in a prominent roadside position in central Brighton. The building has been vacant for some time and has fallen into disrepair, and currently detracts from the Conservation Area.

It is situated on level ground with good, close access to local facilities including public transport, numerous shops and services, primary school, health, recreation and utilities including broadband access. Local health facilities appear to have capacity however schools within the area/catchment do not. The site has good road links being located on a main A road, although is some distance from the SRN.

The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, although is in fairly close proximity to an ANA, recreation, landscape, groundwater or flood risk. The site currently consists of a Grade II listed building. It is situated within the Valley Gardens Conservation Area and adjoins the North Laine Conservation Area. The site is subject to varying levels of high noise from the adjacent road and is within the AQMA. It is unknown whether the site has potential for contamination. The site is not within a Tall Building Corridor, however is within the Edward Street heat network cluster opportunity area.

The site has policy constraints relating to heritage and loss of community uses.

The site currently has an extant planning consent to demolish the listed building and redevelop the site to provide a mix of uses including 70 residential units and an application under consideration to revise the design and layout of the scheme. It is noted that the council has accepted the principle of loss of the listed building. The recent planning application suggests the owner is willing to develop the site. The site has potential for a mix of uses, in accordance with its planning consent, subject to mitigation.

Achievability	Achievable in long term (11-15 years)
Overell Commencers	

The site is situated within DA3. It is located within close proximity to the mixed-use area of Lewes Road, with the adjacent Bear Road residential neighbourhood to the east. The site slopes steeply upwards in an easterly direction following the gradient of Coombe Road. The site has good, close access to local facilities and services including health, recreation, shops, public transport, schools and utilities. Health facilities, primary schools and catchment secondary schools appear to have capacity. The site is situated within the Lewes Road Tall Building Corridor and is in fairly close proximity to the Brighton University Heat Network Opportunity Area and has good access to main A roads and the SRN. The site is unlikely to have any issues relating to biodiversity designations, heritage, archaeology, geology, recreation or landscape.

The site is situated within the AQMA, is adjacent to a road with high levels of traffic noise and parts of the site have a high risk of surface water flooding. The site is situated within GSPZ 1. It is unknown whether the site has any potential for contamination.

The site is currently in use as a self-storage facility (B8) and appears to be well used. Any change of use would need to meet the policy tests of City Plan Part One Policy CP3.5 regarding proving redundancy. It is unknown whether the owners are willing to develop the site. The site could have potential for a mix of uses subject to mitigation.

Overall Site Location and	The site is located within the Portslade Industrial Area which		
Surroundings	comprises a mix of uses. Access to the site is via Camden Road. Site		
	in a prominent roadside location and visible from Wellington Road.		
Land ownership and control -	Silvi Trimming Ltd (planning application 2002)		
no constraints or complex	Wellington House consists of 8 units, presumed to be leased to		
multiple ownership	individual tenants. Unknown terms of lease.		
Willingness of land owner to	Site not put forward during call for sites. No recent planning		
develop site	applications submitted to redevelop the site.		
Achievability	Achievable in medium term (6-10yr supply)		
Occasional Commencers			

The site is situated on a prominent position fronting the A259 Wellington Road, opposite the harbour. The site consists of 8 individual units presumably let to individual tenants with predominant B1/B8 use. The ground floor units fronting Wellington Road have recently been acquired by Small Batch Coffee to roast coffee and also offer on-site sales of drinks and food (presume A3 use). The site has existing access via Camden Road and has good, close access to many local facilities including bus and train services, primary schools, health, shops, recreation and utilities. Secondary schools are located further away. Both primary and the catchment area secondary school appear to have capacity, as do local health facilities. The site has good access to main A roads, and reasonable access to the SRN. The site is within the Shoreham Harbour tall building nodes, and also within the Shoreham Harbour Heat Network Cluster Opportunity Area.

The site is unlikely to have any issues regarding biodiversity designations, flood risk, geology, recreation, landscape, heritage, groundwater pollution, or archaeology.

The site is situated within the AQMA and is subject to high levels of road noise. It is also situated in close proximity to the working harbour, and within an industrial estate which may be a potential source of noise nuisance.

The site is situated within the South Portslade Industrial Area, which is designated as a Strategic Employment/Mixed-use Area, including for some residential within CPP1 DA8. It is also site allocation SP3 within Shoreham Harbour Joint Area Action Plan policy CA3, which has been submitted for public examination; which allocates the site for residential development up to six storeys in height. Upon adoption of the JAAP it will update and supersede the key employment site designation currently in place by virtue of policy DA8 of CPP1.

The townscape environment in this location is described as being unsightly and run-down. Redevelopment could therefore help to regenerate the Wellington Road street-front in this area and improve the designated Green Corridor between the road and the site.

The site has policy constraints relating to loss of land in employment uses and would need to demonstrate redundancy in order to meet the requirements of CPP1 CP3.5.

It is unknown whether the owner is willing to redevelop the site. Site is considered to have potential for residential uses subject to mitigation.

Overall Summary		
·	ighbourhood of Whitehawk on one of the main reads through the	

Situated within the residential neighbourhood of Whitehawk on one of the main roads through the estate, in an area of low-medium density housing. The site is currently vacant and was formerly used as a health clinic which has been replaced by a more recent nearby development. It is situated on sloping ground with good, close access to local facilities including health, primary schools, recreation, public

transport, a local centre and utilities. Some primary schools appear to have capacity, as do health facilities. The catchment secondary school is located some distance away, although this does appears to have capacity. The site is located some distance from the SRN.

The site is not within a Tall Building Corridor and is not within a heat network opportunity area.

The site is unlikely to have any issues relating to biodiversity, geological or archaeological designations, air quality, flood risk, road noise, groundwater, landscape, recreation, heritage or contamination.

The site has policy constraints relating to loss of community facilities.

The recent planning application suggests the owner is willing to develop the site.

The site has potential for residential development in accordance with its planning consent.

	Peter Gladwin Primary 1,200m (spare capacity on allocation day
	17/18)
Secondary School	PACA 965m (spare capacity on allocation day 17/18)
	King's School 1,000m (no spare capacity on allocation day 17/18)

GP Surgery	Mile Oak Medical Centre 670m (currently accepting new patients
	10/17)
Local centre or convenience shop	
	extensive shops and services can be found on Boundary Road
	District Centre (c.2,500m) or Southwick Square (c.2,000m)
Park / Play area	Mile Oak Recreation Ground 900m
Access to Utilities including	Broadband exchange 1,800m (good access)
broadband exchange	Unlikely to be other issues with utilities due to proximity to
	existing residential uses.
Constraints	
Asset of Community Value	No
AQMA	Not within or adjacent to.
Noise	Adjacent to Mile Oak Road, however unlikely to be road noise issues.
	Site not recorded as being subject to road noise issues from the A27.
Flood risk	In flood zone 1.
	No risk of surface water flooding. No recorded flooding incidents.
	According to the JBA1 indicative ground water map of Brighton and
	Hove, the whole site is within an area which has a 0-25% risk of
	ground water flooding.
Groundwater Source	Not within.
Protection Zone	
International Ecological	None on site. Castle Hill SAC 12km
Designations (SAC)	
National Ecological	None on site Castle Hill SSSI and NNR 12km
Designations (SSSI)	Black Rock to Newhaven Cliffs SSSI 9km
Local and other Ecological	Oakdene Southwick Hill SNCI on part of site identified as having
Designations (SNCI/LNR)	potential for housing in UFA. Site designated due to presence of Red
	Star Thistle. Biological records indicate that lowland calcareous
	grassland is found to the east part of site 2.
	Entire site NIA.
	No TPOS on site.
	UFA 2015 concluded that impacts, including any loss of the SNCI
	would require mitigation e.g. enhancement of retained habitats,
	restoration of calcareous grassland areas and retention of red star
Coological designations	thistle.
Geological designations Recreational Value	None on site.
Recreational value	Site has some recreational value and is used by the local community.
	Designated open space, pony grazing and dog walking/informal recreation takes places on site. North Portslade ward has an overall
	•
Landscano Issues / SDND	deficiency in open space, including natural/semi-natural.
Landscape Issues / SDNP	Site adjacent to SDNP on western edge. UFA 2015 suggested that the presence of an uncharacteristic
	hedgerow along the western edges of the sites, as well as the
	presence of a double line of pylons cutting across the spur detracts
	from the relationship between the sites and the wider SDNP. The
	sites are visible as open space from certain areas within the SDNP,
	although obscured by vegetation from other viewpoints.
	UFA 2015 concluded that development could be delivered across
	parts of the site 2 without having significant adverse effect.
	Development within site 1 would be more likely to have significant
	effects and require adequate mitigation.
	errects and require adequate minigation.

Heritage Assets	None on site or in close proximity.	
Archaeological Value (ANA)	None on site or in close proximity.	
Contamination/remediation or	Unknown but considered unlikely.	
geological issues	·	
Topography and gradients	The ground slopes down in a southerly direction on a spur from	
	Southwick Hill. The western side of site 1 rises steeply, whereas the	
	southern end of site 1 slopes more gently.	
Site within Article 4 Direction	No

NC4 – SNCI	Adjacent to SDNP	
	Site within Nature Improvement Area. Part of site SNCI.	
	Loss of open space.	
SHLAA Analysis (where relevant)		
Site Capacity	30	
Implied Area Density	27dph	
Availability/Deliverability Issues		
Overall Site Location and	Situated outside the built up area boundary, adjacent to the SDNP, a	
Surroundings	main road and a low-density residential area. The site consists of	
	designated and non-designated open space, and is part SNCI.	
Land ownership and control –	Site owned by BHCC –Education. No school usage of site for >15	
no constraints or complex	years.	
multiple ownership		
Willingness of land owner to	No recent planning applications.	
develop site		
Achievability	Achievable in medium term (6-10 years)	
O		

The site is owned by BHCC (Education) and consists of areas of designated open space (natural/seminatural) and areas of undesignated open space. Part of the site is used as pony grazing paddocks and part of the site is an SNCI. It is an urban fringe site situated outside the built up area boundary, with the SDNP to the west, a road serving the Mile Oak area to the east, and a low density residential area to the south and south-east of the site. A further urban fringe site (site 3) is situated to the north of the site. The site was identified as having potential for residential development in the Urban Fringe Assessments 2014 and 2015.

Although the site has no existing road access, road access could be gained via an extension to Hillcroft. The site has reasonable access to the SRN. The site is in close proximity to local bus services, although the service is fairly infrequent, running every 20 minutes. The site has close access to a local convenience store and doctors surgery, and reasonable access to recreation facilities, and primary and secondary schools, both of which appear to have some capacity. The adjacent SDNP also offers opportunities for recreation. Other services, including a train station and a wider selection of shops and services are not located in close proximity to the site. The site should have good access to broadband access and although there are unlikely to be existing utilities on site, it is likely that these will be in close proximity serving the adjacent residential areas.

The site is unlikely to have any issues relating to air quality, noise, surface water flood risk,

contamination, heritage assets, GSPZ, archaeological or geological designations. The site is unlikely to have any impact on European or national ecological designations, however, part of the site is a SNCI and therefore development could impact upon this designation and any ecology on site. The site has high recreational value in its current form as is designated open space with public access with it noted that the North Portslade ward has an overall deficiency in open space, including natural/semi-natural. Development could have landscape sensitivities due to proximity to the SDNP. The site could have a risk of groundwater flooding.

The site is not within a tall building corridor and is not located within a Heat Network Opportunity Area.

The site has policy constraints relating to landscape, ecology/biodiversity, open space and may raise issues relating ground water flooding.

The site is considered to have potential for residential uses subject to appropriate mitigation.

	allocation day 17/18)	
GP Surgery	Mile Oak Medical Centre 720m (currently accepting new patient	
	11/17)	
Local centre or convenience shop		
	Also, convenience stores on Valley Road and Mile Oak Road.	
	More extensive shops and services can be found on Boundary	
	Road District Centre (c.2,500m) or Mill Lane Local Centre and	
	Southwick Square (c.2,000m).	
Park / Play area	Mile Oak Recreation Ground 400m	
Access to Utilities including	Broadband exchange 1,800m (good access)	
broadband exchange	No utilities on site, however in close proximity to existing	
	residential uses.	
Constraints		
Asset of Community Value	No	
AQMA	Not within	
Noise	Road noise levels vary across site ranging from 55-74 dcbls from	
	adjacent A27.	
Flood risk	Some small areas of varying flood risk on parts of the site.	
Groundwater Source	Within GSPZ 1.	
Protection Zone		
International Ecological	None on site. Castle Hill SAC 12km	
Designations (SAC)		
National Ecological	None on site Castle Hill SSSI and NNR 12km	
Designations (SSSI)	Black Rock to Newhaven Cliffs SSSI 9km	
Local and other Ecological	Part of site (sites 5 and 5a) within SNCI (Mile Oak Fields). Site	
Designations (SNCI/LNR)	designated for number of notable species. Biological records	
	indicate presence of some protected and notable species.	
	Entire site NIA.	
	UFA 2015 (Landscape & Ecology) concluded that development which	
	resulted in any loss to the SNCI would require appropriate	
	mitigation, including e.g. enhancement of retained habitats within	
	the SNCI and other habitats and restoration of calcareous	
	grasslands. Mitigation should also increase robustness to any	
	increase in recreational pressure. UFA recommended that potential	
	development area and yield suggested by UFA 2014 should be	
	reduced in order to reduce likelihood of significant ecological	
	impacts.	
Geological designations	None on site.	
Recreational Value	Yes. Allotments in use (UF site 6). Although the remaining sites are	
	privately owned, some informal recreation takes place across the	
	sites, e.g. dog-walking, and therefore the sites have some	
	recreational value. North Portslade has an overall deficiency in open	
	space.	
Landscape Issues / SDNP	Site separated from SDNP by A27.	
-	UFA 2015 (Landscape & Ecology) found that development would	
	have some degree of landscape impact, with lowest impact arising	
	from development on 4a and the lower slopes of sites 4, 4b and 6	
	and more significant adverse impacts arising from development in	
	other locations. UFA 2015 concluded development can be delivered	
	2 2	

	with a state of court and court in court and court and a state of court and in
	without significant adverse impacts provided that development is
	minimised on the upper slopes of 4b and permeability is maintained
	to retain sight lines through to downland. Study suggested that the
	yield suggested by the UFA 2014 may need to be reduced to avoid
	significant landscape impacts.
Heritage Assets	None on site or in close proximity. Thundersbarrow Hill Scheduled
	Monument lies 1km to the west although the UFA 2015
	(Archaeology) found that impacts on the setting would be unlikely
	due to the backdrop of existing residential development.
Archaeological Value (ANA)	Large part of site within Mile Oak ANA. UFA 2015 (Archaeology)
	concluded that the sites have a very high potential for archaeological
	potential and development likely to have significant impacts on
	archaeological deposits. However these were considered unlikely to
	be of national significance that would necessitate preservation in
	situ.
Contamination/remediation or	Unknown but unlikely due to greenfield nature.
geological issues	
Topography and gradients	Sites lie on Mile Oak Hill. Sites 4, 4a and 4b occupy the steeper west-
· -	facing slope; site 5 forms the crest sloping to the west, south and
	east; sites 5a and 6 slope to the north-east. Gradient varies across
	the sites.

SA4 Urban Fringe SA5 SDNP CP10 Biodiversity CP16 Open Space NC4 SNCI HE12 – Archaeology  SHLAA Analysis (where relevant) Site Capacity Implied Site Density Availability/Deliverability Issues Overall Site Location and Surroundings  Land ownership and control – no constraints or complex multiple ownership Willingness of land owner to	Allows development within urban fringe where a site has been allocated for development within a DPD. UFA 2014 is a material consideration in determination of applications prior to adoption of Part 2.  Adjacent to SDNP.  Site within Nature Improvement Area. Part of site SNCI (to be renamed Local Wildlife Site through City Plan Part Two).  Loss of open space.  Impacts on archaeology.  195 21dph  Situated outside the built up area boundary, contained by the A27 to the north and the low-density residential area of Mile Oak to the south. The site consists of designated and non-designated open space, and is part SNCI and allotments.  BHCC own site 6 (allotments).  Remaining sites are privately owned in multiple ownership.

The sites are in multiple ownership, including BHCC and private individuals, and consists of areas of designated open space (natural/semi natural and allotments) and areas of undesignated open space. Part of the site is an SNCI. It is an urban fringe site situated outside the built up area boundary with the A27 to the north, beyond which lies the SDNP, and a low density residential area to the south. Parts of the sites were identified as having potential for residential development in the Urban Fringe Assessment 2014 and 2015.

The site has no existing road access, although there is access from Overdown Rise. The site has reasonable access to the SRN through Mile Oak. The site has good access to some services including a bus stop (with regular service), schools, local park and a convenience store. The site has reasonable access to health facilities. Schools and health facilities appear to have some capacity. Other services, including a train station and a wider selection of shops and services within a local centre are not located in close proximity to the site. The site should have good access to broadband access and although there are unlikely to be existing utilities on site, it is likely that these will be in close proximity serving the adjacent residential areas.

The site is unlikely to have issues relating to air quality, geological designations, heritage or contamination. The site is unlikely to have any impact on European or nationally designated ecological sites, however part of the site is a SNCI and therefore development could impact upon this designation and any ecology on site. The site has recreational value, particularly the allotment sites, but also those which are used informally and it is noted that there is an overall deficiency in open space within North Portslade. The site could have issues relating to road noise, with parts of the site subject to high noise levels, surface water flood risk, groundwater as located within GSPZ 1, archaeology, and landscape due to proximity to the SDNP.

The site is not within a Tall Building Corridor and is not located within a Heat Network Opportunity Area.

The site has policy constraints relating to ecology/biodiversity, landscape, open space, archaeology and may raise issues relating to surface water flooding and the protection of the aquifer.

There is an extant planning consent regarding some of the sites which confirms suitability for some development and willingness to develop these sites. The extant consent does not affect the current use of the allotments. Site is considered to have potential for residential uses subject to appropriate mitigation.

National Ecological	Castle Hill SSSI and NNR 11,000m Black Rock to Newhaven Cliffs SSSI 8,000m	
Designations (SSSI)		
Local and other Ecological	TPO on parts of site.	
Designations (SNCI/LNR)	Whole site (north and south) comprises Benfield Valley SNCI (to be	
	renamed Local Wildlife Sites under Part Two City Plan). UFA 2015 carried out preliminary ecological appraisal and identified	
	a wide range of habitats including amenity grassland, semi-improved	
	neutral grassland, semi-natural broadleaved woodland and	
	broadleaved plantation woodland, scrub, hedgerow and bare	
	ground offering potential for a range of species. Some of the	
	habitats are recognised as priority habitats in the LBAP and under	
	s41 of the NERC Act.	
Geological designations	None	
Recreational Value	High recreational value. Publically accessible open space; some	
	associated with golf course use and natural/semi-natural open space	
	typologies. Within an area with open space deficiencies.	
Landscape Issues / SDNP	The entire site forms a green corridor stretching 1.5km from the	
	SDNP down to the A270 Old Shoreham Road. It is separated from	
	the SDNP by the A27. The extensive tree cover along the boundaries	
	gives the area an undeveloped and enclosed character. There is a	
	degree of continuity between the landscape of the SDNP and the	
	green corridor that extends south into the city. The wooded area of	
	Benfield Valley is prominent in views of the city from some points in	
	the SDNP.	

	Landscape sensitivity varies across the site. The northern part of the site (UF site 10) forms a hill which is visible from the SDNP. The UFA 2014 concluded it was very sensitive to development. The more southern parts of the entire site (UF sites 11 and 12) were still found to be sensitive to development, but that a small amount of development could be built without the green wedge being compromised. The 2015 UFA concluded potential for significant adverse landscape impacts associated with development could be likely in the short to medium term until new screen planting reaches maturity. The study notes the key necessity in introducing housing to the Benfield Valley would be to provide sufficient mitigation to maintain a green corridor which can be utilised for public recreation without a sense of development intruding within its strong vegetated perimeter.
Heritage Assets	Benfield Barn Conservation Area adjacent to eastern edge of site. Hangleton Conservation Area located to the east of the site. Potential development areas are well screened from Hangleton Conservation Area; some potential for limited adverse impacts on the setting of Benfield Barn although vegetation likely to screen any development. Listed Buildings contained within both Conservation Areas including Benfield Barn. St Helen's church is located on higher ground and can be seen from the site, although is situated within 20 <sup>th</sup> century housing.
Archaeological Value (ANA)	Archaeological Notification Area (Benfield Valley) located across the northern part of the site (site 10). Saxon burials have been found in the area. UFA 2015 Archaeological Desk-Top Study (site 11) found the area to have moderate to high potential for archaeology.
Contamination/remediation or geological issues	Unknown.
Topography and gradients	Site slopes downwards in a north to south direction.
Site within Article 4 Direction	No
Opportunities	
Within Tall Building Area	No
Within District Heat Network	No
Opportunity Area	
Key Policy Issues (e.g. within a S	pecial Area or other policy considerations)
SA4 Urban Fringe	Allows development within urban fringe where a site has been
CP10 Biodiversity	allocated for development within a DPD. UFA 2014 is a material
CP15 Heritage	consideration in determination of applications prior to adoption of
CP16 Open Space	Part 2. The 2015 UFA would also be a material consideration.
CP17 Sports Provision	Site within Nature Improvement Area. Whole site SNCI (to be
HE1 – Listed buildings	renamed Local Wildlife Site through City Plan Part Two).
HE3 – Setting of listed buildings HE6 – Conservation area	Any potential impacts on Listed Buildings, Conservation Areas and Archaeology would need to be addressed.
HE12 – Archaeology	Any loss of open space would need to be addressed; site is within an
NC4 – SNCI	area of open space deficiencies.
NC9 - Benfield Valley	2005 Brighton & Hove Local Plan indicates Benfield Valley should remain free from built development and be reserved for outdoor recreation. Area North of Hangleton Lane should remain as open space in uses e.g. golf course. 2005 policies would be superceded by those in City Plan Part Two once adopted.

SHLAA Analysis (where relevant)	
Site Capacity	Detailed further consideration by BHCC Policy and Heritage Team
	and ESCC County Ecologist and Landscape Architect suggests
	potential for approximately 100 units across 2 potential
	development areas; 0.9 ha in area north of Hangleton Lane and 0.7
	in area south of Hangleton Lane.
Implied Site Density	Approx 60dph
Availability/Deliverability Issues	
Overall Site Location and	An urban fringe site. The site is located between the low density
Surroundings	residential areas of Hangleton and Mile Oak, although is separated
	from Mile Oak by the Hangleton Link Road. The site has good access
	to the SRN. Proximity to SDNP may result in landscape sensitivities
	which would need to be addressed.
Land ownership and control –	BHCC own site – leased to Benfield Investments.
no constraints or complex	Restrictive covenants resulting from Sainsbury's development –
multiple ownership	currently protect remainder of site for outdoor recreation.
	BHCC may have to follow section 123 of Local Government Act.
Willingness of land owner to	Site was put forward during Call for Sites exercise (2016). Site has
develop site	been promoted for development several times.
Achievability	Achievable in medium term (6-10 years)
Occased Comerce and	

The site is owned by BHCC and leased to Benfield Investments. It is designated open space with public access and forms an important green corridor stretching from the SDNP into the urban area. It is an urban fringe site situated outside the built up area boundary which extends into the urban area, with low density residential development to the east, commercial retail development to the south and the SRN bordering the site to the north and west. The site was identified as having potential for a small amount of residential development in the Urban Fringe Assessments 2014 & 2015 in two small areas of the site.

The site has good road access, with Hangleton Lane splitting the site into its southern and northern parts, and lies adjacent to the Hangleton Link Road and SRN. However, this does mean that the site is subject to road noise levels. Bus services are located within reasonable distance but not close to the site.

The site has reasonable access to primary and secondary schools, with schools appearing to have capacity including the catchment secondaries, and reasonable access to local shops and health services. The site has good access to local parks. The site has good access to broadband and may have access to some utilities on site. The site is unlikely to have any issues relating to air quality and the GSPZ.

The site is unlikely to have any impact on European or national ecological or geological designations however the entire site is a designated SNCI and therefore development is likely to impact upon this designation and any ecology on site. The site has high recreational value in its current form as is designated open space with public access. The site is not within a tall building corridor and is likely to have landscape sensitivities due to proximity to the SDNP and the importance of the green wedge that defines it's character in landscape terms. It is also visibly prominent from some points of the SDNP. The site has heritage issues due to the Listed Benfield Barn and its proximity to Conservation Areas and other Listed Buildings, and also has potential for archaeology. The site is not located within a Heat Network Opportunity Area.

The site has a number of constraints relating to landscape, ecology/biodiversity, open space, heritage, archaeology and may raise issues relating to surface and ground water flooding.

The current lease-holders appear willing to develop the site and the site has been promoted for development on a number of occasions.

It is considered that some development in accordance with the identified development areas proposed

through City Plan Part Two could secure the positive and long term management and maintenance of the open spaces, ecology and heritage assets and improve public access and connectivity with the adjoining urban areas and the South Downs National Park. Detailed consideration has been given to the potential development areas identified in the 2014 UFA by the council's Policy and Heritage Team and East Sussex County Council's Ecologist and Landscape Architect. As a consequence, the two potential development areas have been reviewed and further adjusted. Given the relatively contained and enclosed nature of the more southern parts of Benfield Valley, the indicative residential density associated with the two potential development areas has also been reviewed.

The site is considered to have some potential for residential development provided that all relevant planning considerations are addressed and appropriate mitigation can be secured.

# Site Profile Land at and adjoining Horsdean Recreation Ground, Patcham

Local and other Ecological	None on site. Coney Wood SNCI 450m; Ladies Mile dLNR 660m;
Designations (SNCI/LNR)	Eldred Avenue & Withdean Woods pLNR 800m
	No TPOS on site, however natural/semi-natural open space
	therefore likely to have some ecological value.
Geological designations	None on site
Recreational Value	Yes. Publically accessible open space. Noted that there is no over-
	riding deficiency in open space within the ward or sub-area.
Landscape Issues / SDNP	Potential. SDNP boundary adjoins the A27 (<50m from northern
	extent of site), however A27 screened from site by extensive tree
	cover. The slopes to the east and west of the sports pitch become
	more sensitive with elevation as inter-visibility with the SDNP
	increases, although the A27 has an impact on landscape character in
	this location.
Heritage Assets	Dovecote at Patcham Court Farm SM c.400 to the east; Ewe Bottom
	SM, Patcham c. 800m to the north. Earthworks and lynchets near
	Eastwick Barn SM, Patcham c.900m to the west. Tegdown Hill SM c. 990m to the northeast.
	Patcham Conservation Area located c.200m southwest of the area of
	potential. Numerous listed buildings contained within Conservation
	Area.
	Locally listed buildings also contained with Conservation Area.
	Conservation Area Character Statement says "the open spaces
	towards the outer edges of the conservation area and immediately
	beyond it are important in retaining a physical and visual green
	buffer between the historic village and surrounding suburbs. Long
	views to Coney Hill and the South Downs form particularly important
	backdrops". Part of recreation ground identified as "green buffer"
	within character statement.
Archaeological Value (ANA)	Area of potential is within the Horsdean ANA.
Contamination/remediation or	Unknown but unlikely.
geological issues	
Topography and gradients	Whole of the site formed of in a type of bowl, with the lowest level
	part forming the sports pitch. Slopes rise to the east and west of the
	sports pitch. There is an approximate 2m change in levels across the

	area of potential.
Site within Article 4 Direction	No
Opportunities	
Within Tall Building Area	No

UFA 2014 is a material consideration in determination of applications prior to adoption of Part 2.  Site within Nature Improvement Area. Loss of open space. Impacts on settings of Listed Buildings, Conservation Areas, Scheduled Monuments and Archaeology.
HE12 SM and Archaeology	
SHLAA Analysis (where relevant)	
Site Capacity	25
Implied Site Density	20dph
Availability/Deliverability Issues	
Overall Site Location and Surroundings	An urban fringe site situated outside the built up area boundary. Separated from the SDNP by the A27. Area of potential consists of publically accessible open space (natural/semi-natural), adjacent to the Patcham neighbourhood, with good access to the SRN.
Land ownership and control –	BHCC ownership.
no constraints or complex multiple ownership	
Willingness of land owner to develop site	There are no current planning applications to develop any part of the site.
Achievability	Achievable in short-medium term (1-5, 6-10 years)

The entire site is owned by BHCC and is designated open space of various typologies including parks & gardens, outdoor sports and natural/semi-natural. It is an urban fringe site situated between the built up area boundary and the A27, with low density residential development to the south. Part of the site was identified as having some potential for residential development in the Urban Fringe Assessment 2014, which includes natural/semi-natural open space. The 2015 UFA study confirmed potential for some residential development but at a reduced yield to allow for appropriate mitigation including the need to protect important views to the nearby Conservation Area and listed buildings lying to the south of the site.

The site has good, close access to the SRN, primary and secondary schools, recreation, local shops, and bus services. The site has good broadband access but is unlikely to have any utilities on site. Health facilities are located further from the site. Local schools did not appear to have capacity on allocation day, whereas health facilities appear to have capacity.

The site is unlikely to have any issues with air quality, European or national biodiversity designations, geological designations, and contamination. The site is not suitable for tall buildings and is not within a heat network opportunity area.

The site has various constraints. Proximity to the SNDP may result in landscape sensitivities, particularly on the higher slopes of the site. The site suffers from road noise due to proximity to the A27. The site has a high recreation value as is publically accessible designated open space although there is no over-riding deficiency in open space within the ward or sub-area. The site is in fairly close

proximity to heritage assets of various importance and any development may impact upon their setting. The site forms part of the NIA. The site is within Groundwater Source Protection Zone 2. The site therefore has several policy constraints relating to landscape, open space, ecology/biodiversity, archaeology, and heritage and may raise issues relating to protection of the aquifer.

The site is owned by BHCC. There are no current planning applications to develop any part of the site. The site is considered to be suitable for some residential development subject to appropriate mitigation.

Achievability	Achievable in longer term (11-15 years)
Overall Summary	
•	

The site is owned by BHCC and is designated open space of various typologies including natural/seminatural, amenity grassland and sports pitches. It is an urban fringe site situated between the built up area boundary and the A27, with low density residential development to the south-west and north east of the site, and a main road linking to the A27 at the east of the site. Part of the southern-edge of the site was identified as having potential for residential development in the Urban Fringe Assessment 2014 which includes the sports pitches and amenity greenspace only.

The site has good, close access to the SRN, primary and secondary schools, recreation, a convenience store, health and bus services. Local schools did not appear to have capacity on allocation day, although the catchment secondary is increasing its pupil intake to accommodate need. Health facilities appear to have capacity. The site is located some distance from the nearest broadband exchange and is unlikely to have any utilities on site.

The site is unlikely to have any issues with geological designations, air quality, flood risk or contamination.

The site is unlikely to have any issues with European or national biodiversity designations however the area with potential is immediately adjacent to declared LNR and development could impact upon this designation. The site also forms part of the NIA and has high recreational value in its current form as is designated open space with public access, although it is noted there is no over-riding deficiency in open space within the ward or sub-area, including the amenity greenspace typology. Development could result in landscape impacts due to proximity to the SDNP and the elevated nature of parts of the site. A Scheduled Monument is located towards the northeast of the site and the site is situated within an ANA. The site suffers from road noise from the A27and has varying topography and does not currently have any road access. The site is located within a GSPZ (3).

The site is not within a Tall Building Corridor and is not located within a Heat Network Opportunity Area.

The site has several policy constraints relating to landscape, ecology, open space, heritage and archaeology. It is noted there is no over-riding deficiency in open space within the ward or sub-area. The site is owned by BHCC. The site is considered potentially available in the longer term. The site is considered to be suitable for residential development subject to appropriate mitigation.

Designations (SNCI/LNR)	suggest presence of calcareous grassland habitats (reason for	
	designation) within the sites themselves.	
	Sites located within NIA.	
	Ancient Woodland located immediately to the south of site 21a.	
	UFA 2015 (ecological assessment) found semi-improved grassland	
	habitats in parts of the sites and broadleaved woodland, with it	
	recommended that any development in this location should seek to	
	minimise loss of these habitat types.	
<b>Geological designations</b>	None on site. Black Rock to Friars Bay RIGS 6,000m	
Recreational Value	Sites have recreational value as designated open spaces. Noted that	
	there is no over-riding deficiency in open space within the ward.	
Landscape Issues / SDNP	Adjacent to SDNP although separated by the A27 on the northern	
	side of the site where Stanmer Park Great Wood is located. Coldean	
	Woods (within SDNP) adjoining site on southern side of site.	
	UFA 2015 concluded that development could be delivered on this	
	site without significant landscape effect provided that building	
	heights did not break the wooded skyline and that access could be	
	achieved without breaking the tree-belt along Coldean Lane.	
Heritage Assets	Sites situated within Stanmer Park estate Historic Park & Garden	
	however is truncated from the main focus of the estate by the A27	
	and the Varley Halls development. The trees along Coldean Lane	
	and a flint wall in some places marks the estate edge.	
	No listed buildings on site or in close proximity. Listed buildings	
	within Stanmer Park c.600m from site, however located beyond the	
	Great Wood and therefore not visible from the site. No Conservation	
	Areas on site, however Stanmer Conservation Area in close	
	proximity c. 70m from nearest point on site 21a, however situated	
	on the other side of the A27.	
Archaeological Value (ANA)	Entire site within Varley Halls ANA. UFA 2015 (Archaeology)	
	concluded there is high potential for archaeological deposits across	
	the site based on previous excavations and that development would	
	be likely to have significant impact on buried archaeological deposits	

	which would need investigating.
Contamination/remediation or	Unlikely due to greenfield (undeveloped) state.
geological issues	
Topography and gradients	Situated within the steep northern slopes of the coombe in which
	Coldean is located. Both sites slope steeply down towards Coldean
	Lane in a north to south direction.

multiple ownership	by way of a long leasehold.
Willingness of land owner to	Site 21 has been identified through the Joint Venture as being
develop site	suitable for development, which indicates willingness to develop this
	part of the site. The Joint Venture is between BHCC and Hyde
	Housing to develop 1,000 affordable homes across the city.
Achievability	Achievable in medium to longer term (6-15 years)
Overall Summary	PLICC designated as apparent of various typologies including
True rusham tuinaa aitaa arrusad bri	DUCC designated as an an appeal of various type legics including

Two urban fringe sites, owned by BHCC, designated as open space of various typologies including natural/semi-natural and countryside. The sites slope steeply and are situated between Coldean Lane and the A27, adjacent to the Varley Park development comprising PBSA and various other student services.

Parts of the sites were identified as having potential for development in the Urban Fringe Assessment 2014. The 2015 UFA confirmed development potential but recommended a reduced area of development potential for site 21 to avoid impacts on woodland and grassland habitats. The site has good, close access to a convenience store, bus services, although there are only 3 services

an hour, and health services, and reasonable access to a primary school and park. The primary school

and health services appear to have capacity. The site is some distance from the nearest designated retail centre (Lewes Road), and the catchment secondary, is also some distance away. However, there is a secondary school with capacity which is closer to the site.

The site has good access to A roads, and close access to the SRN. Situated off Coldean Lane, one of the sites (21a) could be accessed via an extension to the road serving the Varley Park development, however there is no existing road access to site 21. The site is located some distance from the nearest broadband exchange and although there are no utilities on the site, utilities are within close proximity. The site is unlikely to have any issues with European or national ecological designations, geological designations, air quality, flood risk or contamination.

The site falls within a proposed local wildlife site (LWS), the NIA, and part lies adjacent to an area of Ancient Woodland; it will therefore raise issues relating to biodiversity. The site is likely to have some recreational value as open space although it is noted that there is no over-riding deficiency in open space within the ward. The site could have landscape impacts due to proximity to the SDNP. The site is situated within a Grade II Historic Park and Garden and within the setting of a Conservation Area and may therefore have heritage impacts. The site is within an ANA and has high potential for archaeology. The site is located within a GSPZ (2).

The site is not within a tall building corridor and is not located within a Heat Network Opportunity Area.

The site has policy constraints relating to landscape, heritage, archaeology, biodiversity and open space and may raise issues with the protection of the aquifer.

The site is owned by BHCC and has been identified as a priority site as part of Joint Venture Initiative (BHCC working with Hyde New Homes) to deliver 1,000 affordable homes across the city which shows willingness to develop the site.

The site is considered to be suitable for some residential development subject to appropriate mitigation.

broadband exchange	Unlikely to be other utilities on site.
Constraints	
Asset of Community Value	No
AQMA	Not within
Noise	Less than 55 dcbls.
Flood risk	In flood zone 1. No flooding incidents on site. No risk of surface
	water flooding.
	According to the JBA indicative ground water map of Brighton and
	Hove, the whole site is within an area which has a 0-25% risk of
	ground water flooding.
Groundwater Source	Not within.
Protection Zone	
International Ecological	None on site. Castle Hill SAC 4,500m
Designations (SAC)	
National Ecological	None on site. Castle Hill SSSI & NNR 4,500m
Designations (SSSI)	Brighton to Newhaven Cliffs SSSI 1,100m
Local and other Ecological	Majority of UF site, including area of potential, within Whitehawk
Designations (SNCI/LNR)	Hill LNR designated for calcareous grassland habitats.
	Woodvale Cemetery SNCI 350m; Wilson Avenue SNCI 370;
	Sheepcote Valley SNCI 580m. Within NIA.
	UFA 2015 states that the site with potential consists mainly of
	scrub, with some semi-improved neutral grassland adjacent.
	Some habitats have potential for protected or notable species and
	it is noted that some protected and notable species have been
	recorded across the wider site. Development would result in loss
	of small part of LNR, however the study concluded that the loss
	would not significantly affect the designation of the LNR, and could
	be mitigated by enhancement and recreation of calcareous
	grassland and management to increase robustness of LNR to any
	increase in recreational pressure arising from development.
Geological designations	None on site.
Recreational Value	High value as designated open space (natural/semi-natural) with
	public access and public footpaths linking Whitehawk to Brighton.
	Noted that there is no over-riding deficiency in open space within
	the ward although the sub-area has a deficiency in outdoor sports,
	parks & gardens and children & young people.
Landscape Issues / SDNP	North-eastern part of the site adjoins the SDNP although
	remainder surrounded by residential development and open space
	uses.
	Whitehawk Hill is a prominent feature in views from the SDNP.
	However, existing development within the coombe (Whitehawk) is
	largely screened by the higher ground of Sheepcote Valley. The

height of the existing blocks of flats adjacent to the area of potential ensures that they avoid impact on the wider landscape. The top elevation of buildings would be a key consideration in terms of avoiding significant effect, as would avoiding higher ground.  Heritage Assets  Whitehawk Camp Scheduled Monument lies within the southwestern corner of the UF site, c.500m from area of potential. The UFA 2015 (Archaeology) concluded that the area of potential was within the wider setting of the SM. Historic Park & Garden Woodvale Cemetery c.450 from area of potential. No Conservation Areas or Listed Buildings on site. Nearest listed building Brighton General Hospital c. 100m from western extent of UF site; 500m from area with potential and not visible from site due to topography.  Archaeological Value (ANA)  Archaeological Value (ANA)  Whitehawk ANA covers southern half of UF site, located c. 100m to the southwest of the area of potential. The UF site as a whole was assessed in the UFA 2015 as having very high archaeological potential; with the area of potential as having moderate potential for archaeology. Unknown but unlikely.  Contamination/remediation or geological issues  The UF site as a whole consists of a horse-shoe shaped ridge linking Whitehawk Hill, Race Hill and Red Hill. Topography varies across the entire site. The area of potential solpes steeply upwards from a north west to south-east direction, with a level change of 4m across the site.  Site within Article 4 Direction  Opportunities  Within Tall Building Area  Within Tall Building Area  No however area of potential is adjacent to existing taller buildings  No  Opportunity Area  Key Policy Issues (e.g. within a Special Area or other policy considerations)  Allows development within a DPD. he site to the Joint Venture
hold.
enture Initiative (BHCC working
er 1,000 affordable homes across
e sites in the city identified as a
ces Committee 12.10.17
10 years)

The entire UF site is owned by BHCC and is designated open space of various typologies. The majority of the site is a declared LNR. The site is situated within areas of residential development to the east and west, allotments to the south, and Warren Road with Race Hill area to the north. The site consists of a horse-shoe shaped ridge linking Whitehawk Hill, Race Hill and Red Hill with topography varying across the site.

A small part on the eastern edge of the site was identified as having potential for development in the Urban Fringe Assessment 2014, which includes natural/semi-natural open space (scrub) within the LNR. The potential was confirmed by the 2015 UFA.

The site (area of potential) has good, close access to recreation, bus services, and a convenience store and reasonable access to a primary school and health facilities. The catchment secondary school is located some distance away, as is the nearest junction of the SRN. Schools and health facilities within the area appear to have capacity. There are unlikely to be any utilities on site.

The site is unlikely to have any issues with geological designations, GSPZ, air quality, road noise, surface water flood risk or contamination.

The site is unlikely to have any issues with European or national biodiversity designations, however the area with potential is within the declared LNR and development may impact upon it and robust mitigation would therefore be required. The site also forms part of the NIA. The site has high recreational value in its current form as is designated open space with public access and public footpaths linking Whitehawk to other parts of Brighton. Noted that there is no over-riding deficiency in open space within the ward although the sub-area has a deficiency in some typologies. Any development on the site which broke the ridge-line would be likely to have landscape impacts. The site is within the wider setting of a Scheduled Monument, which is located towards the southwest of the site. The site is situated in close proximity to an ANA. The site is steeply sloping in nature and does not currently have any road access. The site could have a risk of groundwater flooding. The site is not within a tall building corridor however is situated adjacent to existing taller buildings. The site is not located within a Heat Network Opportunity Area.

The site has several policy constraints relating to landscape, ecology/biodiversity, open space, archaeology and may raise issues relating surface water and ground water flooding.

The site is owned by BHCC and has been identified as one of the priority sites as part of Joint Venture Initiative (BHCC working with Hyde New Homes) to deliver 1,000 affordable homes across the city.. The site is considered to be suitable for residential development subject to appropriate mitigation.

Access to Utilities including	Nearest broadband exchange 170m (good access).	
broadband exchange	Unlikely to be utilities on site, however adjacent to a row of	
	housing.	
Constraints		
Asset of Community Value	No	
AQMA	Not within	
Noise	Less than 55dcbls across site.	
Flood risk	Within flood zone 1. No risk of surface water flooding on site.	
	According to the JBA indicative ground water map of Brighton and	
	Hove, the whole site is within an area which has a 0-25% risk of	
	ground water flooding.	
Groundwater Source	Not within.	
Protection Zone		
International Ecological	None on site. Castle Hill SAC 4,500m	
Designations (SAC)		
National Ecological	None on site. Castle Hill SSSI & NNR 4,500m	
Designations (SSSI)	Brighton to Newhaven Cliffs SSSI 2,400m	
Local and other Ecological	Approximately half of the UF site (but not the area with potential)	
Designations (SNCI/LNR)	includes the Bevendean Downland proposed LNR, designated for	
	rich chalk grassland.	
	Whitehawk Hill LNR c.30m (other side of Bear Road).	
	Woodvale Cemetery SNCI 400m; Wilson Avenue SNCI 470;	
	Sheepcote Valley SNCI 500m. Northern part of site within NIA.	
	UFA 2015 found habitats located within the area of potential were	
	of low ecological value. Habitats in the adjacent proposed LNR were	
	also of low ecological value (poor semi-improved grassland). Study	
	concluded that development in this location could facilitate ecological enhancements of habitats in the proposed LNR.	
	Area of potential immediately adjacent to NIA.	
Geological designations	None on site.	
Recreational Value	Value for equestrian-based recreation. Site is not designated as	
Neci cational value	open space.	
Landscape Issues / SDNP	Immediately adjacent to SDNP on east side of site. UFA 2015	
Landscape issues / Spiri	concluded that although the site occupies a prominent position on	
	the summit of Race Hill, the existing cluster of buildings and tree	
	cover would mean that development in this location would not	
	result in a significant landscape change. However, the character of	
	any development would be an important consideration and to avoid	
	any act and principle from the art important consideration and to avoid	

	development that created a suburban feel to minimise any
	significant landscape impact.
Heritage Assets	Whitehawk Camp Scheduled Monument c.950m from area of
	potential.
	Woodvale Cemetery Historic Park & Garden c.550 from area of
	potential.
	No Conservation Areas or Listed Buildings on site. Nearest listed
	building Brighton General Hospital c. 800m from site.
	The UFA 2015 (Archaeology) concluded that development in this
	location would not be anticipated to have a significant impact on
	designated heritage assets.
Archaeological Value (ANA)	Site within Race Hill Mill ANA 0m
	Bevendean ANA 450m
	Whitehawk ANA 500m
	UFA 2015 (Archaeology) concluded that the site has high
	archaeological potential, particularly as the site contains significant
	amounts of open space.
Contamination/remediation or	Unknown but unlikely.
geological issues	
Topography and gradients	Located on the top of a ridge. Site slopes steeply downwards in a
	southerly direction with a change of c.25m across the site in a north
	to south direction.

develop site	Two recent planning applications to develop site.
Achievability	Achievable in short / medium term
	Achievable in Short / medium term
Overall Summary	

The UF site is partially owned by BHCC and in use by South Downs Riding School as pony paddocks. The site is situated in a fairly prominent and elevated position on the Race Hill ridge top, in a broadly undeveloped location and has a rural feel, adjacent to a small row of terraced housing, with open space surrounding the remainder of the site, including the SDNP.

The southern half of the site was identified as having potential for development in the Urban Fringe Assessment 2014 and the potential was confirmed by the 2015 UFA although at a reduced yield. The site has good, close access to a regular bus service and broadband access, however has limited access to any other services with local shops, primary schools, secondary schools, health facilities, and a local park all located more than 1,000m away. Schools and health facilities do appear to have capacity. There are unlikely to be any utilities on site. The site has existing road access, and although there is fairly direct access to the SRN through Woodingdean, the SRN is some distance away. The site is unlikely to have any issues with biodiversity designations, as although the area of potential is adjacent to a preposed LNR, development may present an opportunity to improve the ecological value of this area. The site is also unlikely to have any issues with air quality, noise, surface water flood risk, geological designations, GSPZ, heritage assets and contamination.

The site contains the Race Hill ANA and has high potential for archaeology. The site is adjacent to the SDNP. The site has recreational value, particularly for those who use the site for equestrian purposes. The site is steeply sloping in nature. It is not within a tall building corridor and is not located within a Heat Network Opportunity Area. The site could be at risk of some groundwater flooding. The site has policy constraints relating to landscape, ecology/biodiversity, archaeology and may raise issues relating to ground water flooding and the protection of the reservoir.

The site is owned by BHCC. There are no current planning applications to develop any part of the site. The site is considered to be suitable for residential uses subject to appropriate mitigation.

### Site Profile Land north of Ingleside Stables, Warren Road, Brighton

Designations (SNCI/LNR)	chalk grassland. Whitehawk Hill dLNR c330m.
	Sheepcote Valley SNCI 110m; Wilson Avenue SNCI 500m;
Coological designations	Woodingdean Cemetery SNCI 520m. Entire UF site within NIA.
Geological designations	None on site.
Recreational Value	High value for equestrian-based recreation. Part of site designated
Landan Adam (CDND	as open space (natural/semi-natural).
Landscape Issues / SDNP	Adjacent to SDNP. Fairly prominent and elevated position with
	existing stables and associated development standing out as existing
	development within a broadly undeveloped gap between Brighton &
	Woodingdean. The character and visual prominence of a
	development in this location would be a key consideration, and
	suburbanising influences should be avoided in order to ensure there
	is no significant landscape effect. Importance to retain a sense of
	separation from Woodingdean and break up the massing of any new
	building with existing and new planting.
Heritage Assets	None on site or within close proximity (<1,000m)
Archaeological Value (ANA)	None on site. Nearest ANA c.630m. However the ridge-top location
	could mean there is potential for prehistoric, Roman or early
	medieval remains.
Contamination/remediation or	Unknown but unlikely.
geological issues	
Topography and gradients	Occupying the northern crest of a ride which slopes down from the
	east in a north-westerly direction. The site has a level change of
	approximately 10m across the site.

Availability/Deliverability Issues	
Overall Site Location and	An urban fringe site contained on 3 sides by the SDNP and adjacent
Surroundings	to Bevendean Down pLNR. Part of area with potential designated
	open space. Currently used for equestrian purposes.
Land ownership and control –	BHCC – presumably leased to Ingleside Stables.
no constraints or complex	
multiple ownership	
Willingness of land owner to	No recent planning applications to develop site.
develop site	
Achievability	Achievable in short-medium term
-	

An urban fringe site owned by BHCC and in use by the Ingleside Livery Yard. The site is situated on a fairly prominent position in a broadly undeveloped location between Brighton and Woodingdean, adjacent to the SDNP. Proximity to the busy Warren Road, and to Woodingdean, mean that this location is not isolated from development.

The central part of the site was identified as having potential for development in the Urban Fringe Assessment 2014 and development potential confirmed by the 2015 UFA subject to appropriate mitigation.

The site has good, close access to a regular bus service and broadband access, however has limited access to any other services with local shops, primary schools, secondary schools, health facilities, and a local park all located more than 1,000m away. Schools and health facilities do appear to have capacity. There are unlikely to be any utilities on site. The site has existing road access, and fairly direct access to the SRN through Woodingdean.

The site is unlikely to have any issues with European and National biodiversity designations, geological or archaeological designations, air quality, road noise, flood risk, groundwater, heritage assets or contamination.

The site is adjacent to a proposed Local Nature Reserve and the whole site is within the NIA. The site is adjacent to the SDNP. The site has some recreational value, particularly for those who use the site for equestrian purposes, and also as designated open space.

The site is sloping in nature, is not within a tall building corridor and is not located within a Heat Network Opportunity Area.

The site has policy constraints relating to landscape, biodiversity and open space and these would need to be addressed.

The site is owned by BHCC. There are no current planning applications to develop any part of the site. The site is considered to be suitable for some residential development subject to appropriate mitigation.

	Roedean School Bank SNCI 420m	
Geological designations	None on site	
Recreational Value	None	
Landscape Issues / SDNP	Contained by SDNP on three sides.	
	The area with potential is already occupied by large agricultural	
	buildings therefore development in this location would not expand	
	the extent of the Ovingdean built area, however character of any	
	development would be an important consideration to ensure it does	
	not appear to be urban expansion in a rural area. Removal of	
	modern agricultural buildings and incorporation of open space could	
	enhance landscape character in this location.	
Heritage Assets	Within Ovingdean Conservation Area. 14 listed buildings within	
	Conservation Area, including the Grade I listed St Wulfrans Church.	
	No listed buildings within area of potential.	
	Some buildings locally listed in close proximity to site.	
	The Conservation Area Character Statement describes the site	
	within Character Area 3: The Farms, as "forming the northern limit	
	of the village and gateway to the Downs - contains groups of	
	functional buildings which are largely of no architectural of historic	
	merit. Some of those buildings remain in use as a farm and stables.	
	These uses contribute greatly to the character of the area, and act as	
	a strong reminder of Ovingdean's agricultural past. Other buildings -	
	particularly those of the former poultry farm - are under-used or	
	dilapidated, and detract from the area."	
	The farms can be seen in views from St Wulfrans' Church and in	
	views of the Conservation Area from downland to the northwest of	
•	l the village	
	the village.	
Archaeological Value (ANA)	Part of site within Ovingdean ANA. Other ANAs in close proximity to site including Longhill 170m; Longhill Road 240m; Cattle Hill 260m.	

Contamination/remediation or	Potential from agricultural uses.

Site Capacity	50
Implied Site Density	12dph
Availability/Deliverability Issues	
Overall Site Location and	An urban fringe site located on the northern extent of the historic
Surroundings	core of Ovingdean village. Contained by the SDNP on three sides,
	situated within the Ovingdean Conservation Area, with residential
	uses to the south. Area with potential is currently occupied by a
	variety of farm buildings and some non-designated open spaces.
Land ownership and control –	Part owned by BHCC (eastern and western parts of site). Central part
no constraints or complex	of site privately owned.
multiple ownership	
Willingness of land owner to	No planning applications for development of the site have been
develop site	submitted.
Achievability	Achievable in medium term (6-10years)
Overall Summany	

A collection of 3 urban fringe sites, part-owned by BHCC, predominately occupied by farm buildings. The site is situated in the bottom of a valley, towards the northern extent of the historic core of Ovingdean village.

The entire site was identified as having potential for development in the Urban Fringe Assessment 2014. This potential was confirmed by the 2015 UFA.

The site has close access to a convenience store. The site is not considered to have close access to any other services. There is a nearby bus stop, however the service only runs twice an hour, and schools, health services, local park and a local centre are all located at least 1,200m from the site in Rottingdean. Some local schools and health facilities appear to have capacity, but the nearest primary schools in Rottingdean do not.

There is existing road access to the site and although there is fairly direct access to the SRN through Woodingdean the SRN is some distance away. The site is likely to have some utilities serving the existing farm buildings and adjacent residential area.

The site is unlikely to have any issues with biodiversity or geological designations, air quality, GSPZ or road noise.

Part of the site may have issues regarding surface water and groundwater flood risk, and the site could include contamination relating to agricultural uses. The site is situated within a Conservation Area and could be within the setting of some listed buildings. Part of the site is within an ANA. The site's position adjacent to the SDNP could mean the site has landscape sensitivities and the 2015 UFA notes

that any development would need to be sensitively designed, in keeping with existing character. The site is not located within a tall building corridor and is not located within a Heat Network Opportunity Area.

The site has policy constraints relating to heritage and archaeology and these would need to be robustly addressed.

The site is part-owned by BHCC. There are no current planning applications to develop any part of the site. The site is considered to be suitable for residential development subject to appropriate mitigation.

Proximity of services	
Vehicular access	Site is contained by roads on three sides, however there is no
	current vehicular access onto site.
Distance to Strategic Road	5,000m to A27 junction
Network	
Public Transport Access	Bus stops situated adjacent to site on Falmer Road, and
(train station/bus route/distance	Ovingdean Road. Some services, running approximately every 15-
to nearest bus stop)	20minutes.
	Train station: Falmer Station c5,000m
Primary School	Rudyard Kipling primary 1,500m (spare capacity on allocation day
	17/18)
	Woodingdean primary 2,200m (spare capacity on allocation day
	17/18)
Secondary School	Longhill Secondary 450m (spare capacity on allocation day 17/18)
GP Surgery	Drs Baker and Fahmy, The Ridgeway, Woodingdean, 1,200m
	(accepting new patients 10/17)

Local centre or convenience shop	Ovingdean Stores convenience store 500m; Rottingdean High
	Street Local Centre 1,800m
Park / Play area	Rottingdean Fields 1,100m
Access to Utilities including	1,900 to nearest exchange (good access)
broadband exchange	Unlikely to be utilities on site however utilities in close proximity
	serving adjacent residential areas.
Constraints	
Asset of Community Value	No
AQMA	Not on site or adjacent to site. Rottingdean AQMA 1,800m.
	Planning appeal decision re. BH2014/02589 rejected air quality
	impacts associated with development.
Noise	Not mapped
Flood risk	Some historic surface water flooding incidents adjacent to site.
	Entire western edge of site has high risk of surface water flooding.
	Within Flood zone 1.
	According to the JBA indicative ground water map of Brighton and
	Hove, the whole site is within an area which has a 25-50% risk of ground water flooding.
Groundwater Source	Within GSPZ 3.
Protection Zone	WITHIN GSPZ 5.
International Ecological	Castle Hill SAC 1,700m
Designations (SAC)	Castle Hill SAC 1,700Hi
National Ecological	Castle Hill SSSI and NNR 1,700m
Designations (SSSI)	Black Rock to Newhaven Cliffs SSSI 1,500m
Local and other Ecological	Ovingdean Road Horse Paddocks SNCI 50m from site.
Designations (SNCI/LNR)	Biological records identify calcareous grassland habitats form
	northern part of site and presence of various protected or notable
	species including red star thistle and hornet robberfly.
	Some areas of trees with TPO on western edge of site. UFA 2015
	concluded that appropriate mitigation should include enhancement
	of SNCI habitats to the north to increase robustness to recreational
	pressure, retention and enhancement of grassland habitats within
	the wider site, and retention of notable species including red star
	thistle and hornet robberfly.
Geological designations	Black Rock to Friars Bay RIGS 1,500m
Recreational Value	Used as horse paddocks. Site is privately owned and access may be
	prohibited. Noted that there is no over-riding deficiency in open space within the ward although has an under-provision of
	allotments, amenity greenspace and children & young people's
	playspace.
Landscape Issues / SDNP	Adjacent to SDNP, separated by Falmer Road. UFA 2015 concluded
, ,	that development of the site would be likely to result in an adverse
	landscape effect on the SDNP but appropriate mitigation could
	reduce impacts. Carefully located screening planting which does not
	itself impact on openness of views from Falmer Road would be
	required.
Heritage Assets	None on site. Ovingdean Conservation Area , 500m to the west
	although the site does not form part of its setting and is separated
	by existing residential area.
Archaeological Value (ANA)	High Hill West ANA forms eastern edge of site.
Contamination/remediation or	Unknown but considered unlikely due to uses.

geological issues	
Topography and gradients	The site slopes gently down in an east to west direction and is
	located at the foot of landform which slopes down from High Hill in
	the east and Mount Pleasant in the north.
Site within Article 4 Direction	No

no constraints or complex	pitches.
multiple ownership	
Willingness of land owner to	Recent planning applications suggest willingness to develop privately
develop site	owned part of site
Achievability	Achievable in medium term (6-10years)
Overall Summary	

The southern part of the site forms playing fields used by Longhill School and is not considered within this summary.

The remainder of the site is privately owned and consists mainly of horse paddocks and a wooded area. It is an urban fringe site situated outside the built up area boundary, and is separated from the SDNP to the east by Falmer Road. The remainder of the site is also contained by roads and existing low density residential areas of Ovingdean to the west and Rottingdean to the south. The site has no existing road access onto the site, although is contained by three roads and has fairly direct access to the SRN via Falmer Road, although this is some distance. There are fairly regular bus services in close proximity to the site linking the site to Woodingdean and Brighton. The site has close access to a secondary school, however primary schools are located further away, with the closest being in Woodingdean. All schools appeared to have some capacity on allocation day. The site has close access to a convenience store, with a greater range of shops, as well as health services and opportunities for recreation being located further away in Rottingdean or Woodingdean. The site is unlikely to have utilities on site, however is adjacent to existing residential areas.

The site is unlikely to have any impact on European or national ecological designations, although could impact on a nearby locally designated ecological site. The site itself has high potential for ecological value, with some protected and notable species/habitats recorded on site. The wooded area also has TPOs. Part of the site forms an ANA and could therefore have archaeological value. The site may have some issues with surface water and groundwater flooding. The site is situated within GSPZ 3. The site itself is unlikely to have any issues regarding air quality, although it is recognised that

Rottingdean High Street is an AQMA and impacts upon this was one of the reasons for the recent planning refusal. The site is also unlikely to have any issues relating to heritage assets or contamination.

The site is not located within a tall building corridor, and its position adjacent to the SDNP could mean the site has landscape sensitivities including fragmentation. The site is not located within a Heat Network Opportunity Area. The site has policy constraints relating to biodiversity and open space, although there is no over-riding deficiency in open space within the ward.

The site has recently been refused planning consent and an appeal decision is expected end June 2018. The refusal of planning permission did not challenge the overall principle of some residential development being acceptable on the site. Therefore, subject to the appeal decision, the site is considered to have some potential for residential development subject to appropriate mitigation

### **Overall Summary**

The site is privately owned and is currently used for caravan storage. It is an urban fringe site, situated on the level ground at the edge of Saltdean. It is surrounded by open spaces of various typologies to the north, east and west, with residential to the south. The SDNP is situated beyond the open spaces. The entire site was identified as having potential for development in the Urban Fringe Assessment 2014.

The site has road existing road access via the top Saltdean Vale, which also serves the Saltdean Vale football ground. The site has good, close access to a reasonably regular bus service. The site does not have close access to other local services including health facilities, schools, shops or parks, with these all being situated more than 1,100m, although does have other opportunities for recreation via direct access to the SDNP. There is limited capacity in primary schools, however secondary schools have capacity and health facilities are accepting new patients. There may be issues with broadband access due to distance from the exchange. The SRN is located some distance away.

The site is unlikely to have any impact on European or national ecological or geological designations, although could impact upon the adjacent locally designated ecological sites. The site is also unlikely to have any issues relating to air quality, road noise, and heritage.

The site has a high risk of surface water flooding on parts of the site, as well as risk of groundwater flooding, and is situated with a groundwater source protection zone 1. The site is in fairly close proximity to an ANA. It is unknown whether the site has potential for contamination.

The site is not located within tall building corridor and its position in fairly close proximity to the SDNP could mean the site has landscape sensitivities, although it is situated within an established residential setting and is not in an elevated prominent position. The site is not located within a Heat Network Opportunity Area.

There has not been any planning application submitted for the site.

The site is considered to have potential for residential development subject to appropriate mitigation.

### **Overall Summary**

The cluster of sites are privately owned in multiple ownership and consists of farm buildings, paddocks and residential dwellings. It is an urban fringe site situated outside the built up area boundary, surrounded by the SDNP to the north, east and west, with an established low density residential area to the south. Parts of the site cluster were identified as having potential for development in the Urban Fringe Assessments 2014.

The site has existing road access, although is situated far from the SRN. The site has good, close access to a reasonably regular bus service. The site does not have close access to other local services including health facilities, schools, shops or parks, with these all being situated more than 1,100m, although does have other opportunities for recreation via direct access to the SDNP. There is limited capacity in primary schools, however secondary schools have capacity and health facilities are accepting new patients. There may be issues with broadband access due to distance from the exchange.

The site is unlikely to have any issues relating to air quality, road noise, and heritage.

The site is unlikely to have any impact on European or national ecological or geological designations, although could impact upon the adjacent locally designated ecological site. The site itself could have some ecological value due to the presence of certain habitats. The site is also immediately adjacent to an ANA and may therefore have archaeological potential. The site could have potential for contamination due to former uses. Part of the site could have high potential for surface water flooding and for groundwater flooding. The site is situated within a GSPZ 3.

The site is not located within a tall building corridor and its position adjacent to the SDNP could mean the site has landscape sensitivities, although it is situated within an established residential setting and is not in an elevated prominent position. The site is not located within a Heat Network Opportunity Area.

The site has recently been approved outline planning permission for 67 no residential dwellings which suggest the owner is willing to develop the site. The site is considered to have potential for residential development subject to mitigation.

Achievability	Achievable in short-term (1-5 years)
Overall Summary	

The site is privately owned and consists of managed grassland that has previously been used as paddocks. It is an urban fringe site situated outside the built up area boundary, surrounded by the SDNP to the north and west, with an established low density residential area to the east and south. The site was identified as having potential for residential development in the Urban Fringe Assessments 2014 and 2015.

The site has no existing road access and the recent planning consent included demolition of 6 Falmer Avenue to provide access to the site. There is an hourly bus service in very close proximity to the site, however a more regular bus service to Brighton is also within close proximity. The site has close access to a primary school, which appears to have capacity, local shops and broadband access. Health services, opportunities for recreation (parks) and secondary schools are not within close access to the site, although the SDNP does offer opportunities for recreation. The site is unlikely to have any utilities on site.

The site is unlikely to have any impact on European or national ecological or geological designations, although could impact on the nearby locally designated ecological sites. The site is within an ANA and could therefore have archaeological value. The site may have some issues regarding surface water flooding. The site is within a GSPZ 3.

The site is unlikely to have any issues regarding air quality, road noise, heritage assets, and contamination.

The site is not located within a tall building corridor and its position adjacent to the SDNP could mean the site has landscape sensitivities, particularly due to its elevated position, however is situated within an established residential setting. The site is not located within a Heat Network Opportunity Area. The site has recently been awarded planning consent on appeal for 32no residential dwellings, which suggests the owner is willing to develop the site. The site is considered to have potential for residential uses subject to mitigation.

broadband exchange	No utilities on site due to greenfield nature.
Constraints	The admitted on site and to greenheld flattare.
Asset of Community Value	No
AQMA	Not within
Noise	Less than 55dcbls.
Flood risk	Within flood zone 1. No risk of surface water flooding on site. No
110041101	historic flooding incidents recorded.
Groundwater Source	Not within
Protection Zone	
International Ecological	None on site. Castle Hill SAC 4,300m
Designations (SAC)	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
National Ecological	None on site. Castle Hill SSSI and NNR 4,300m
Designations (SSSI)	Black Rock to Newhaven Cliffs SSSI 990m
Local and other Ecological	Whole site within the Whitehawk Hill LNR designated for presence
Designations (SNCI/LNR)	of calcareous grassland and some rare species. Whole site within
	NIA. UFA 2015 described habitats on sites as allotments, with a
	mosaic of habitats, which although do not contribute to the reason
	of the designation of the LNR are a BAP habitat type, and semi-
	improved neutral grassland to the north, although species recorded
	not particularly characteristic of the LNR designation. There is
	potential for some protected or notable species to be present on
	site. Any development could impact on the surrounding LNR, e.g.
	due to increased recreational pressure/lighting which would require
	robust mitigation Mitigation would also need to include habitat
	management to enhance the surrounding habitats and provision of
	green infrastructure to provide replacement habitats.
Geological designations	None on site
Recreational Value	High value as publically accessible designated open space in current
	allotment use and also natural/semi-natural (statutory allotment).
	Allotments are well used with waiting list. Also, site has value as a
	LNR used for informal recreation. It is noted that there is no over-
	riding deficiency in open space within the ward, although there is a
	wider deficiency across the sub area and under-provision of
Landagana Issues / CDND	allotments across the city.
Landscape Issues / SDNP	Whitehawk Hill is a distinctive topographical feature which is
	prominent in seaward views from the SDNP and from the racecourse
	to the north. However, existing housing on the south-eastern slope has an adverse effect on views and allotment structures add clutter.
	The UFA 2014 concluded that an extension of housing north along
	Beresford Road would have little adverse effect on views from the
	north and east. The UFA 2015 also concluded that development on
	part of the site would be unlikely to have a significant adverse
	landscape effect mainly due to the impact of existing nearby
	development.
	development.

	T
Heritage Assets	Northern part of site adjacent to the Whitehawk Camp Causewayed
	Enclosure Scheduled Monument.
	College Conservation Area c380m from site; East Cliff Conservation
	Area c.450m from site. Both contain numerous listed buildings. Both
	separated by existing development and/or topography.
	Queens Park (800m) & Kemp Town Enclosures (500m) Registered
	Parks & Gardens.
Archaeological Value (ANA)	Whole site Whitehawk ANA. To the north of the site, immediately
	adjacent, is the Whitehawk Camp Causewayed Enclosure Scheduled
	Monument.
	UFA 2015 (Archaeology) concluded that despite the area having high
	potential for archaeology and within an ANA, that archaeological
	potential with the potential development area is likely to have been
	reduced by a century of allotment cultivation. UFA 2015 concluded
	that there would not be issues with regards to settings of designated
	heritage assets including the SM due to the potential development
	area being downslope of the SM and provided that development on
	the upper slopes did not take place.
Contamination/remediation or	Unlikely.
geological issues	
Topography and gradients	Site slopes steeply downwards in a northwest to south-east
	direction.

Achievability	Unlikely to be achieved in the plan period.

### **Overall Summary**

The site is owned by BHCC and is designated open space predominantly in use as statutory allotments with some natural/semi-natural. The whole site is a designated LNR. Numerous objections to any future development were received during the City Plan Part Two Scoping Consultation.

The site is situated on the eastern slopes of Whitehawk Hill which is a prominent topographical feature and forms the southern extent of a horseshoe-shaped ridge which includes Race Hill and Red Hill. A strip on the eastern part of the site was identified as having potential for residential development in the Urban Fringe Assessment 2014, which comprises statutory allotments.

The site has good, close access to some local services including a local park and primary school, and reasonable access to regular bus services and a convenience store. The nearest health facilities are located further away and the catchment secondary is also some distance from the site. There is limited capacity in the nearest primary schools, and the catchment secondary is over-subscribed. There is existing road access to the site serving the allotments, although this is only a single track road. The site is some distance from the SRN. The site has good access to broadband however there are unlikely to be any utilities existing on site.

The site is unlikely to have any issues with geological designations, air quality, road noise, flood risk, groundwater or contamination. Despite its elevated position, the site was considered unlikely to have significant landscape impacts by the 2014 and 2015 UFA studies due to presence of existing development on the lower slopes, however this would be dependent on the type and form of any future development.

The site is unlikely to have any issues with European or national biodiversity designations however the area with potential is within the designated Whitehawk Hill LNR and development could increase recreational pressure on the LNR. The site also forms part of the NIA. The site has high recreational value in its current form as statutory allotments, which are well-used with a waiting list in existence. It is noted that there is no over-riding deficiency in open space within the ward, although there is underprovision of allotments across the city.

The site is situated within an ANA, although the archaeological potential is likely to have been reduced due to allotment cultivation. The site is in close proximity to a SM, although the southern part of the site is not within its setting due to topography. The site has varied topography and slopes steeply downwards in an easterly direction.

The site is not suitable for tall buildings and is not located within a Heat Network Opportunity Area. The site has several policy constraints relating to ecology, biodiversity, loss of open space, and potentially archaeology and heritage.

The site lies on the western edge of East Brighton Ward which is not shown to have open space deficiencies due to the extent of open space within Sheepcote Valley and the South Downs National Park. However the sub area is predicted to have an over-arching open space deficiency by 2030 and there is a shortage of allotments citywide.

The site may have potential for some residential use in the longer term; however this would be dependent on a number of factors including the ability to re-provide suitable and sufficient allotments within the local area and obtaining consent from the Secretary of State for the disposal of the allotments. The site is not considered to be available during the plan period to 2030.

Due to the lack of availability and the considerable number of policy constraints, the site has not been proposed for development in City Plan Part Two.

# Site Profile Roedean miniature Golf Course and land south of A259 (UF site 37)

	17/18)	
GP Surgery	Broadway Surgery (Wellsbourne Centre) 1,800m (currently	
	accepting patients 11/17))	
Local centre or convenience shops	Whitehawk Road Local Centre 750m	
	Asda & Brighton Marina shops 1000m(although very poor links to	
	site across A259)	
Park / Play area	East Brighton Park 400m	
Access to Utilities including	Nearest broadband 1700m (good access)	
broadband exchange	Unlikely to be existing utilities on site, however adjacent to	

	existing resident area.
Constraints	
Asset of Community Value	No
AQMA	Not within
Noise	(Area with potential ) less than 55dcbls.
Flood risk	Within flood zone 1. Eastern border of site has low-high risk of
110041101	surface water flooding on site. No recorded flooding incidents on
	site.
Groundwater Source	Not within.
Protection Zone	
International Ecological	Not on site. Castle Hill SAC 3,800m
Designations (SAC)	,
National Ecological	Castle Hill SSSI and NNR 3,800
Designations (SSSI)	Black Rock to Newhaven Cliffs SSSI is within UF site and c. 150m
	from the area with potential (SSSI also separated from area of
	potential by the A259) (Within Impact Risk Zone for the SSSI). UFA
	2015 concluded development within area of potential would be
	unlikely to result in effects on geological or biological interest of the
	SSSI.
Local and other Ecological	Sheepcote Valley SNCI 160m. Roedean School SNCI 600m. Entire site
Designations (SNCI/LNR)	NIA. Small western section of wider golf course site is a proposed
	Local Wildlife Site (triangular site to rear of 36 – 42 The Cliff).
	The area with potential was found to support amenity grassland,,
	which is of low ecological value and the UFA 2015 concluded that
	minimal ecological mitigation would be required and that
	development could provide opportunities for enhancement.
Geological designations	Black Rock to Newhaven Cliffs SSSI & RIGS within UF site and c.
	150m from area of potential. (SSSI/RIGS adjacent to sea-side of
	A259).
Recreational Value	The site will have recreational value as an open space and is in
	current use as a miniature golf course. It is noted that there is no
	over-riding deficiency in open space within the ward.
Landscape Issues / SDNP	SDNP adjoins the eastern edge of this UF site, although not the area
	with potential. The site is an important part of the setting of
	Roedean School which is within the SDNP and although the site is
	split by a road, the entire site forms part of a continuous open ridge
	that extends inland to Woodingdean.
	UFA 2014 concluded that a small amount of development at the
	western edge would have less landscape impact than development
	elsewhere on the site. UFA 2015 confirmed this provided that
Haritana Assats	dwelling footprints were of similar scale to those adjacent.
Heritage Assets	Within the setting of Grade II listed Roedean School c.750m from
Angha a la giard Malay (ABIA)	site.
Archaeological Value (ANA)	Whole site within Roedean ANA. Undeveloped nature of site could
Contomination / war a disting a	mean that archaeological potential is high.
Contamination/remediation or	Unknown but unlikely.

	course can function successfully on a reduced area. Representations
	submitted to Scoping Consultation for City Plan Part Two.
Achievability	Unlikely to be achieved in the plan period
Overall Summary	

The site is owned by BHCC but is currently leased and in current use as a miniature golf course. It is an urban fringe site with low density residential uses to the north and west, open space to the east, and the A259 and cliffs to the south. The site is highly prominent from the A259 and forms the start of a continuous green space that runs alongside the A259 into Rottingdean. The site is designated open space.

An area in the north-west of the site was identified as having potential for a limited amount of residential development in the Urban Fringe Assessment 2014.

The site has good, close access to a local park, and reasonable access to a local centre with shops, and regular bus services. All other services are all greater than 1,400m including primary and secondary schools and health. The nearest primary schools have limited capacity; the secondary school and health services have capacity. The site has good access to main A roads, although is some distance from the SRN.

The site is unlikely to have any issues with air quality, road noise, groundwater, flood risk, international ecological designations and contamination.

The site has high recreational value, is publically accessible open space and is currently in active use as a miniature golf course. A number of representations were received to the Scoping Consultation raising concerns regarding the loss of open space and current use. The site could impact upon landscape, as the site sits within the setting of the SDNP, although development within the area of potential is unlikely to have significant landscape effects.

The site is also within the setting of the Grade II listed Roedean School, and the entire site is within the Roedean ANA and therefore has potential for archaeology.

Although the nationally designated Black Rock to Newhaven SSSI and the Black Rock to Friars Bay RIGS is within the site, development within the area of potential is unlikely to impact upon the geological or

biological reasons for these designations. The area of potential is amenity grassland, which is low ecological value, however is within the NIA. There are unlikely to be utilities on site.

The site is not suitable for tall buildings. The site is within the Brighton Marina heat cluster opportunity area.

The site has several policy constraints relating to open space, biodiversity, heritage and archaeology. There are no current planning applications to develop any part of the site. The site is BHCC owned and on a long lease to Roedean Miniature Golf Course. The leaseholders have expressed concerns that any development may impact upon the ability to continue to use the site for miniature golf purposes. Site was identified to have potential for some residential development in the 2014 and 2015 UFA studies. However, this would be dependent on a range of various factors including whether the miniature golf course could continue to operate effectively on a smaller site and whether effective measures could be incorporated to address open space needs and range of other considerations. Due to the identified constraints and uncertainty regarding site availability, it is not considered likely that this site could be developed during the plan period. The site is not therefore proposed for any development in City Plan Part Two.
